DIN EN 14752:2025-08 (E)

Railway applications - Bodyside entrance systems for rolling stock

Contents

Page

European foreword 6

Introduction 7

1 Scope 8

2 Normative references 8

3 Terms and definitions 9

4 Constructional requirements 13
4.1 Door design 13
4.1.1 Door throughway design 13
4.1.2 Steps 15
4.1.3 Staff access from track level 18
4.1.4 Relative position of the step edge 18
4.1.5 Train surfing 18
4.1.6 Door windows 18
4.1.7 Design of body side entrance doors used for accessing driver's cabs 19
4.1.8 Water drainage 19
4.2 Mechanical strength 19
4.2.1 Door mechanical strength 19
4.2.2 Step(s) mechanical strength 21
4.3 Local door operating devices 22
4.3.1 Door control devices 22
4.3.2 Emergency egress device 23
4.3.3 Access device 24
4.4 Labels/warning signs 25
4.5 Interfaces with the vehicle 25
4.5.1 Electric and pneumatic power supplies 25
4.5.2 Mechanical interface with the vehicle 25
4.6 Other requirements 25
4.6.1 Fire protection 25
4.6.2 Insulation 26
4.7 Electronic equipment 26
4.7.1 Hardware 26
4.7.2 Software for electronic door control systems 26
4.8 Reliability, availability, maintainability and safety (RAMS) 26
4.9 Protection against electrical hazards 27
4.10 Environmental conditions 27
4.10.1 Weather 27
4.10.2 Water tightness 27
4.10.3 Pressure tightness 28
4.11 Manual and semi-automatic ramps, bridging plates 28

5 Operational requirements 28
5.1 Door control 28
5.1.1 General 28
5.1.2 Release doors and steps 28
5.1.3 Interlocking of released doors 29
5.1.4 Single point failure 29
5.1.5 Mechanical locking 29

5.1.6 Out-of-service devices 29
5.1.7 Isolation for maintenance purposes 31
5.2 Closing and opening conditions 31
5.2.1 Safety during closing 31
5.2.2 Entrance system closed proving 43
5.3 Opening conditions 43
5.3.1 Safety during opening 43
5.3.2 Limitation of opening 43
5.4 Moveable step obstacle detection 44
5.4.1 General 44
5.4.2 Steps outside the vehicle 44
5.4.3 Steps inside the vehicles 44
5.5 Emergency operation 44
5.5.1 Emergency egress 44
5.5.2 Emergency windows in access doors 47
5.5.3 Access device 47
5.5.4 Powering up 48
5.6 Other requirements 48
5.6.1 Passenger access door area illumination 48
5.6.2 Status indication 48

6 Categories of tests 48
6.1 General 48
6.2 Type tests 48
6.3 Routine tests during manufacture 49
6.4 Routine tests on the fully assembled vehicle/train consist 49

7 Documentation related to installation and maintenance of the entrance system 49

Annex A (normative) Passenger operating devices 50

A.1 Purpose 50
A.2 Design of door control devices 50
A.3 Labels on or near control devices 51
A.4 Recommended emergency egress device 52
A.5 Sample of labels 53

Annex B (normative) Water test procedure 54

B.1 Purpose 54
B.2 Test arrangement 54
B.3 Test procedure 55
B.4 Test decision 55

Annex C (normative) Specification and testing of the pressure tightness of door 57

C.1 Purpose 57
C.2 Calculation - Flowchart 57
C.3 Example of pressure tightness requirement specification 57
C.4 Pressure tightness testing 58
C.4.1 General 58
C.4.2 Variable pressure measurement method 58
C.4.3 Variant: Constant pressure method of measurement 60

Annex D (normative) Requirements for measuring the closing forces of power-operated doors 62

D.1 General 62
D.2 Terms and definitions 62
D.3 Measurements 63
D.3.1 Conditions of measurement 63
D.3.2 Measurement points 63
D.3.3 Measuring method 63

Annex E (normative) Test plan 65

Annex F (normative) Load requirements for doors due to aerodynamic loads on passenger trains ..67

Annex G (informative) Clauses in this document requiring clarification in the technical specification 68

Annex H (normative) RIC-KEY 70

Annex I (informative) Calculation of kinetic energy 71

Annex J (informative) Passenger flow detection 77

J.1 General 77
J.2 Light barrier 77
J.3 Step sensors for external steps 77

Annex K (informative) Full door throughway detection system 78

K.1 General 78
K.2 Full door throughway detection systems 78
K.2.1 Full door throughway detection system near the door leaves 78
K.2.2 Full door throughway detection on the door leaf 83

Annex L (informative) Partial door throughway detection system 84

L.1 General 84
L.2 Partial door throughway detection 84
L.2.1 General 84
L.2.2 Detection area 84
L.2.3 Testing 85

Annex M (normative) Anti-Drag test belt material definition 87

M.1 Test object dimension: 87
M.2 Test belt fabric requirements 87

Annex N (informative) Hazards, protection goals and related requirements 88

N.1 General 88
N.2 Relation to the risk management process 88
