DIN EN 15273-1:2026-09 (E)

Railway applications - Gauges - Part 1: General - Common rules for rolling stock and infrastructure

Contents

Page

European foreword 5

Introduction 7

1 Scope 8

2 Normative references 8

3 Terms and definitions 8

4 Symbols and abbreviations 18
4.1 Common symbols 18
4.2 Specific symbols for absolute and comparative gauging processes 28

5 Approaches to gauging 31
5.1 Railway gauging processes 31
5.2 How to use EN 15273 series 32
5.3 Choosing a defined gauge or a gauging process 33
5.3.1 Interoperability between Railway Undertaking and Infrastructure Manager 33
5.3.2 Defined gauging methods 34
5.3.3 Absolute gauging process 36
5.3.4 Comparative gauging process 37

6 Elements involved in a gauging process 37
6.1 General diagram in the lateral direction 37
6.2 General diagram in the vertical direction 38

7 Gauges and gauging process 39
7.1 Defined gauges by calculation 39
7.1.1 Basic elements of the defined gauges 39
7.1.2 Reference profile and associated rules 41
7.2 Absolute and comparative gauging process 42
7.2.1 General 42
7.2.2 Absolute gauging process 43
7.2.3 Comparative gauging process 46

Annex A (normative) Specific considerations for the classic calculations of defined gauges 48

A.1 In the lateral direction 48
A.1.1 Geometric overthrow due to the bogie 48
A.1.2 Geometric overthrow due to the carbody 48
A.1.3 Clearance between the wheelsets and the carbody 49
A.1.4 Clearance between the wheelsets and the track 49
A.1.5 Roll 50
A.1.6 Lateral displacement of the track 57
A.2 In the vertical direction 57

Annex B (normative) Defined kinematic gauges 59

B.1 General 59
B.2 In the lateral direction 60

B.2.1 Inside the kinematic reference profile 60
B.2.2 Outside the kinematic reference profile 62
B.3 In the vertical direction 64
B.3.1 Inside the kinematic reference profile 64
B.3.2 Outside the kinematic reference profile 65
B.4 Pantograph gauge 65
B.4.1 General principle 65
B.4.2 In the lateral direction 66
B.4.3 In the vertical direction 69
B.5 Lower parts 71
B.6 Wheel and rail area 73
B.6.1 General 73
B.6.2 Zone swept by the wheel 73
B.6.3 Position of the check-rails 75
B.7 Contact ramps 75
B.7.1 General 75
B.7.2 For the infrastructure 76
B.7.3 For the rolling stock 76
B.8 Stopping devices 77
B.9 Marshalling hump 78
B.9.1 General convention 78
B.9.2 Track brakes installed close to the marshalling humps 78
B.10 Access to ferries 81
B.10.1 General Principle 81
B.10.2 Passing over link spans onto ferries 81

Annex C (normative) Defined static gauges 82

C.1 General 82
C.2 In the lateral direction 82
C.2.1 Inside the static reference profile 82
C.2.2 Outside the static reference profile 83
C.3 In the vertical direction 83
C.3.1 Inside the static reference profile 83
C.3.2 Outside the static reference profile 83

Annex D (normative) Defined dynamic gauges 85

D.1 General 85
D.2 In the lateral direction 86
D.2.1 Inside the dynamic reference profile 86
D.2.2 Outside the dynamic reference profile 87
D.3 In the vertical direction 88
D.3.1 Inside the dynamic reference profile 88
D.3.2 Outside the dynamic reference profile 89
D.4 Pantograph area 89
D.4.1 General principle 89
D.4.2 In the lateral direction 89
D.4.3 In the vertical direction 90
D.5 Lower parts 91
D.5.1 General 91
D.5.2 Wheel and rail area 91
D.5.3 Stopping devices 91
D.5.4 Marshalling hump 92
D.5.5 Access to ferries 92

Annex E (normative) The absolute gauging process 93

E.1 Brief background 93
E.2 Basic principles 93
E.2.1 General 93
E.2.2 Gauging compatibility 94

E.2.3 Generic throw calculation for absolute and comparative process 95
E.3 Elements of the gauging process 96
E.3.1 Lateral direction 96
E.3.2 Vertical direction 97
E.3.3 Passing clearances (Clearance between vehicles on adjacent tracks) 99
E.3.4 Clearance categories 100
E.3.5 Electrical clearances 101
E.3.6 Pantograph sway 101
E.3.7 Electrification compatibility 102
E.3.8 Cross-level variation 103

Annex F (normative) The comparative gauging process 104

F.1 Background 104
F.2 Basic principles 104
F.2.1 General 104
F.2.2 Gauging compatibility 105
F.2.3 Computer simulation 106
F.3 Gauging process 106
F.3.1 Virtual route 106
F.3.2 Swept envelope calculation 106
F.3.3 Comparison of swept envelopes 107

Annex G (informative) Compatibility between static and kinematic defined gauges 108

Annex H (normative) Steps for access and egress - Location and gaps with platform for defined gauge 111

H.1 General 111
H.2 For the rolling stock 111
H.2.1 Principles 111
H.2.2 Location inside an area 111
H.2.3 Maximum gaps 113
H.2.4 Checking of horizontal location 114
H.2.5 Horizontal location inside an area 116
H.2.6 Maximum horizontal gap 116
H.2.7 Checking of vertical location 116
H.2.8 Vertical location inside an area 117
H.2.9 Maximum vertical gap 117
H.3 Conventional platform position 117
H.3.1 General case 117
H.3.2 For rolling stock dedicated to run on specific national infrastructure 117
H.4 Conventional gaps 120
