

DIN EN 14067-4:2006-02 (E)

Railway applications - Aerodynamics - Part 4: Requirements and test procedures for aerodynamics on open track

Contents		Page
Foreword		5
Introduction		6
1	Scope	7
2	Normative references	7
3	Terms, definitions, symbols and abbreviations	7
4	Resistance to motion	7
4.1	General	7
4.2	Assessment by predictive formulae	8
4.3	Assessment by numerical simulations	8
4.4	Assessment by reduced-scale tests	8
4.5	Assessment by full-scale tests	8
4.5.1	General remarks and application	8
4.5.2	Requirements for train hauling procedure	8
4.5.3	Requirements for coasting test procedure	9
5	Train-induced pressure changes causing loading on objects	11
5.1	General	11
5.2	Assessment by predictive formulae	11
5.2.1	General remarks and application	11
5.2.2	Flat vertical structures parallel to the tracks	11
5.2.3	Flat horizontal structures above the tracks	13
5.2.4	Flat horizontal structures close to tracks	14
5.2.5	Mixed vertical and horizontal or inclined structures close to the tracks	15
5.2.6	Closed structures enveloping the tracks over a limited length up to 20 m	16
5.2.7	Effect of wind on loads caused by the train	17
5.3	Assessment by numerical simulations	17
5.3.1	General remarks and application	17
5.3.2	Requirements	17
5.4	Assessment by reduced-scale tests	18
5.4.1	General remarks and application	18
5.4.2	Requirements for conventional wind tunnel tests	18
5.4.3	Requirements for moving model rig tests	19
5.5	Assessment by full-scale tests	20
5.5.1	General remarks and application	20
5.5.2	Requirements for measuring the undisturbed pressure field	20
5.5.3	Requirements for measuring pressure on a surface near the track	22
6	Train-induced airflow causing loading on objects	23
6.1	General	23
6.2	Assessment by predictive formulae	23
6.3	Assessment by numerical simulations	24
6.4	Assessment by reduced-scale tests	24
6.4.1	General remarks and application	24
6.4.2	Requirements	24
6.5	Assessment by full-scale tests	25
6.5.1	General remarks and application	25

6.5.2	Requirements	25
7	Train-induced loading on passengers at the platform	26
7.1	General	26
7.2	Assessment by predictive formulae	26
7.3	Assessment by numerical simulations	26
7.4	Assessment by reduced-scale tests	26
7.5	Assessment by full-scale tests	26
7.5.1	General remarks and application	26
7.5.2	Requirements	26
8	Train-induced loading on workers at the track side	28
8.1	General	28
8.2	Assessment by predictive formulae	28
8.3	Assessment by numerical simulations	28
8.4	Assessment by reduced-scale tests	28
8.5	Assessment by full-scale tests	28
8.5.1	General remarks and application	28
8.5.2	Requirements for air speed measurements	28
9	Train-induced loading on passing trains	29
9.1	General	29
9.2	Assessment by predictive formulae	29
9.3	Assessment by numerical simulation	29
9.4	Assessment by reduced-scale tests	30
9.5	Assessment by full-scale tests	30
9.5.1	General remarks and application	30
9.5.2	Requirements	30
Annex ZA (informative) Relationship between this European Standard and the Essential Requirements of EU Directive 96/48/EC		31
