ISO 20264:2019 (E)

Stationary source emissions — Determination of the mass concentration of individual volatile organic compounds (VOCs) in waste gases from non-combustion processes

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

3.1 Terms related to FTIR
3.2 Terms related to performance characteristics

4 Symbols and abbreviated terms

5 Measurement principle

5.1 General
5.2 FTIR Spectrometer components
5.3 Interferogram
5.4 Fast Fourier transform
5.5 Beer's law

6 Equipment

6.1 Sampling system
6.2 Analytical apparatus (FTIR)

7 Measurement procedure

7.1 General
7.2 Choice of the measuring system
7.3 Sampling
7.3.1 Sampling location
7.3.2 Sampling point(s)
7.3.3 Extractive sampling
7.3.4 Sampling with a gas bag
7.4 Pre-test and sample quantification procedures

8 Performance chracteristics and criteria

8.1 General
8.2 Performance criteria
8.2.1 Zero check
8.2.2 Repeatability of calibration verification gas
8.2.3 Response time
8.2.4 Losses and leakage in the sampling line

9 Quality assurance and quality control procedure

10 Data quantification

10.1 General
10.2 Data quantification techniques
10.3 Data quantification methodology
10.3.1 Calibration set
10.3.2 Analysis band selection
10.3.3 Lack of fit (linearity) of the analytical software

10.3.4 Validation of analytical model
10.3.5 Sample analysis
10.3.6 Sample result validation
10.3.7 Residual check

11 Validation and uncertainty

Annex A (normative) Determination of the FTIR performance parameters

A.1 Check the instrument resolution and minimum instrumental linewidth
A.2 Wavenumber reproducibility
A.3 Detector linearity

Annex B (informative) Example for IR spectral absorption features of VOCs

Annex C (informative) Examples for analytical band choice

Annex D (informative) The typical spectral regions for the different bond types of VOCs

Annex E (informative) The validation of measurement of individual VOC in waste gas

E.1 General
E.2 Validation of measurement of VOCs by comparision with two measuring FTIR systems
E.2.1 The results of measurement of individual VOCs from painting and printing processes
E.2.2 Results of calculation of the measurement uncertainty
E.3 Validation of measurement of VOC by comparison of each FTIR with GC-PID
E.3.1 The results of measurement of individual VOCs by comparison of each FTIR with GC-PID
E.3.2 The uncertainties for measurement of individual VOCs
