ISO 16000-28:2020 (E)

Indoor air — Part 28: Determination of odour emissions from building products using test chambers

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols and abbreviated terms

5 Principle

6 Test facilities

6.1 General
6.2 Test room and recovery room
6.3 Odour sampling and assessment devices
6.3.1 General
6.3.2 Funnel
6.3.3 Sample containers
6.3.4 Sample presentation system
6.4 Comparative scale
6.4.1 General
6.4.2 Set up of the comparative scale
6.4.3 Check-up of the comparative scale
6.4.4 Measurement of acetone concentration and calibration of the measurement device

7 Test requirements

7.1 General
7.2 Emission test chamber and test room background odour
7.2.1 Background odour
7.2.2 Test room conditions
7.2.3 Ventilation of the test room
7.2.4 Recovery room conditions

8 Odour testing from emission test chambers

8.1 General
8.2 Emission test chamber preparation
8.3 Time of odour measurements
8.4 Conditioning of sample containers
8.5 Handling of sample containers

9 Sensory odour panel and panel leader

9.1 Panel leader
9.1.1 General requirements for the panel leader
9.1.2 Additional requirements for the panel leader for perceived intensity assessments
9.2 Panel selection
9.2.1 General requirements for panel selection
9.2.2 Additional requirements for the panel selection for perceived intensity assessments
9.3 Code of conduct of the panel members
9.4 Correct procedure for determination of the panel size
9.5 Panel training

10 Sensory test methods and procedure

10.1 General
10.2 Procedure
10.3 Determination of acceptability
10.4 Determination of the perceived intensity using a comparative scale
10.4.1 Comparative scale
10.4.2 Panel
10.4.3 Panel training
10.4.4 Procedure
10.4.4.1 General information
10.4.4.2 Step one: Acclimatisation
10.4.4.3 Step two: Performance test
10.4.4.4 Step three: Assessment
10.5 Determination of the hedonic tone

11 Data analysis

11.1 Calculation of mean value and standard deviation
11.2 Accurace of sensory testing

12 Test report

Annex A (informative) Training procedure for the comparative scale

A.1 Training procedure for perceived intensity assessment using a comparative scale
A.2 Evaluation of the training programme

Annex B (informative) General conditions for sensory testing

B.1 Explanation of the flow rate during sensory testing
B.2 Effect of thermal condition of the air to the odour determination of air samples

Annex C (informative) Sampling containers (bags) and sampling and presentation device

C.1 Sampling and presentation device
C.2 Sample containers
C.2.1 General requirements
C.2.2 PET (Nalophane®)
C.2.3 PVF (Tedlar®)
C.2.4 Container performance verification
C.3 Validation procedure for alternative container materials

Annex D (informative) Example for statistical data analysis
