ISO 16000-6:2021 (E)

Indoor air — Part 6: Determination of organic compounds (VVOC, VOC, SVOC) in indoor and test chamber air by active sampling on sorbent tubes, thermal desorption and gas chromatography using MS or MS FID

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Abbreviated terms

5 Principle

6 Reagents and materials

7 Apparatus

8 Conditioning and storage of sorbent tubes

8.1 Conditioning
8.2 Storage of conditioned sorbent tubes before sampling

9 Sampling

9.1 Air sampling
9.2 Sampling volumes
9.3 Storage of loaded samples
9.4 Field blanks

10 Analysis

10.1 Determination of VOC, VVOC and SVOC
10.1.1 Analytical System
10.1.1.1 Checks on analytical system performance
10.1.1.2 Analytical system performance criteria
10.1.1.3 Tune requirements for the mass spectrometer
10.1.1.4 Laboratory proficiency testing schemes and participation in round-robin exercises
10.1.2 Identification of target compounds
10.1.3 Quantification of target compounds and compounds according to task list
10.1.4 Determining the lower limit of quantification
10.2 Identified non-target compounds and unidentified compounds

11 Concentration of analytes in the sampled air

12 Performance characteristics

13 Test report

14 Quality control

Annex A (informative) Total volatile organic compounds (TVOC) and total semi-volatile organic compounds (TSVOC)

A.1 Total volatile organic compounds (TVOC)

A.2 Total semi-volatile organic compounds (TSVOC)
A.3 Limitations of TVOC and TSVOC values

Annex B (informative) Examples of compounds detected in indoor air and from building products in test chambers

Annex C (informative) Description of sorbents

Annex D (informative) Guide on sorbent usage

Annex E (informative) Safe sampling volumes for selected organic vapours

Annex F (informative) Storage recovery of solvents on sorbent tubes
