ISO 10849:2022-09 (E)

Stationary source emissions - Determination of the mass concentration of nitrogen oxides in flue gas - Performance characteristics of automated measuring systems

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Symbols and abbreviated terms 4

5 Principle 5

6 Description of the automated measuring systems 5
6.1 Sampling and sample gas conditioning systems 5
6.2 Analyser equipment 6

7 Performance characteristics and criteria 6
7.1 Performance criteria 6
7.2 Determination of the performance characteristics 7
7.2.1 Performance test 7
7.2.2 Ongoing quality control 7

8 Selection and installation procedure 7
8.1 Choice of the measuring system 7
8.2 Sampling 8
8.2.1 Sampling location 8
8.2.2 Representative sampling 8
8.3 Calculation 8
8.3.1 Conversion from volume to mass concentration for NO 8
8.3.2 Calculation of NO2 and NOx concentrations 9

9 Quality assurance and quality control procedures 9
9.1 General 9
9.2 Frequency of checks 9
9.3 Calibration, validation and measurement uncertainty 10

10 Test report 10

Annex A (informative) Extractive NO, NO2 or NOx measurement systems 12

Annex B (informative) In situ NO and NO2 measurement systems 22

Annex C (normative) NO2-NO converter 26

Annex D (normative) Operational gases 28

Annex E (normative) Procedures for determination of the performance characteristics 29

Annex F (informative) Examples of results for the validation of NOx AMS 37

Annex G (informative) Calculation of uncertainty of measurement of NO and/NO2 or NOx 41

Bibliography 47
