

ISO 10849:2022-09 (E)

Stationary source emissions - Determination of the mass concentration of nitrogen oxides in flue gas - Performance characteristics of automated measuring systems

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms and definitions	1
4 Symbols and abbreviated terms	4
5 Principle	5
6 Description of the automated measuring systems	5
6.1 Sampling and sample gas conditioning systems	5
6.2 Analyser equipment	6
7 Performance characteristics and criteria	6
7.1 Performance criteria	6
7.2 Determination of the performance characteristics	7
7.2.1 Performance test	7
7.2.2 Ongoing quality control	7
8 Selection and installation procedure	7
8.1 Choice of the measuring system	7
8.2 Sampling	8
8.2.1 Sampling location	8
8.2.2 Representative sampling	8
8.3 Calculation	8
8.3.1 Conversion from volume to mass concentration for NO	8
8.3.2 Calculation of NO₂ and NO_x concentrations	9
9 Quality assurance and quality control procedures	9
9.1 General	9
9.2 Frequency of checks	9
9.3 Calibration, validation and measurement uncertainty	10
10 Test report	10
Annex A (informative) Extractive NO, NO₂ or NO_x measurement systems	12
Annex B (informative) In situ NO and NO₂ measurement systems	22
Annex C (normative) NO₂-NO converter	26
Annex D (normative) Operational gases	28
Annex E (normative) Procedures for determination of the performance characteristics	29
Annex F (informative) Examples of results for the validation of NO_x AMS	37

Annex G (informative) Calculation of uncertainty of measurement of NO and/NO₂ or NO_x	41
Bibliography	47
