ISO 14956:2002-08 (E)

Air quality - Evaluation of the suitability of a measurement procedure by comparison with a required measurement uncertainty

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative reference 1

3 Terms and definitions 1

4 Symbols and abbreviated terms 2

5 Principle 4

6 Requirements 7
6.1 Methods and materials 7
6.2 Performance characteristics 7
6.3 Required measurement quality 7

7 Required performance related to dynamic conditions 7
7.1 General 7
7.2 Response time 7

8 Required performance related to stationary conditions 8
8.1 Analytical function, model function and variance function 8
8.2 Identification of sources of uncertainty 9
8.3 Assignment of sources of uncertainty to performance characteristics 9
8.4 Definition and quantification of conditions of operation of the measurement system 10
8.5 Quantification of the impact of selected performance characteristics as partial standard uncertainties 11
8.6 Estimation of the combined standard uncertainty 14
8.7 Estimation of the expanded uncertainty 14
8.8 Evaluation of compliance with the required measurement quality 14

9 Field verification 14

10 Report 15

Annex A (informative) Default ranges of chemical interferents 16

Annex B (normative) Coverage factors derived from effective degrees of freedom 18

Annex C (informative) Example of an assessment of compliance of UV fluorescence method for SO2 with requirements on ambient air quality 19

Annex D (informative) Examples of field verification programmes 24

Bibliography 26
