DIN EN 12516-2:2022-08 (E)

Industrial valves - Shell design strength - Part 2: Calculation method for steel valve shells (includes Amendment A1:2021)

Contents

Page

European foreword 4

1 Scope 7

2 Normative references 7

3 Symbols and units 7

4 General conditions for strength calculation 13

5 Design pressure 14

6 Nominal design stresses for pressure parts other than bolts 14
6.1 General 14
6.2 Steels and cast steels other than defined in 6.3, 6.4 or 6.5 15
6.3 !Austenitic steel and austenitic cast steel with a minimum rupture elongation > 30 %" 16
6.4 !Austenitic steel and austenitic cast steel with a minimum rupture elongation > 35 %" 16
6.5 Ferritic and martensitic cast steel 16
6.6 Creep conditions 16

7 Calculation methods for the wall thickness of valve bodies 16
7.1 General 16
7.2 Wall thickness of bodies and branches outside crotch area 17
7.2.1 General 17
7.2.2 Cylindrical bodies or branches 17
7.2.3 Spherical bodies or branches 18
7.2.4 Conical bodies or branches 18
7.2.5 Bodies or branches with oval or rectangular cross-sections 20
7.3 Wall thickness in the crotch area 27
7.4 Examples of pressure-loaded areas Ap and metallic cross-sectional areas Af 28
7.4.1 General 28
7.4.2 Cylindrical valve bodies 29
7.4.3 Spherical valve bodies 31
7.4.4 Oval and rectangular cross-sections 32
7.4.5 Details 33

8 Calculation methods for bonnets and covers 36
8.1 General 36
8.2 Covers made of flat plates 36
8.2.1 General 36
8.2.2 Circular cover without opening, with 41
8.2.3 Circular covers with concentric circular opening, with 42
8.2.4 Non-circular covers (elliptical or rectangular) 43
8.2.5 Special covers made of flat circular plates for specific load and clamping conditions 44
8.3 Covers consisting of a spherically domed end and an adjoining flanged ring 59
8.3.1 General 59
8.3.2 Wall thickness and strength calculation of the spherical segment 60
8.3.3 Calculation of the flanged ring 61
8.3.4 Reinforcement of the stuffing box area 63
8.4 Dished heads 63
8.4.1 General remarks 63

8.4.2 Solid dished heads ... 64
8.4.3 Dished heads with opening ... 65
8.4.4 Allowances on the wall thickness ... 67

9 Calculation method for pressure sealed bonnets and covers ... 68

10 Calculation methods for flanges ... 70
10.1 General ... 70
10.2 Circular flanges ... 70
10.2.1 General ... 70
10.2.2 Flanges with tapered neck ... 71
10.2.3 Flanges greater than DN 1 000 ... 73
10.2.4 Welding neck with tapered neck according to Figure 48 ... 74
10.2.5 Weld-on flanges ... 75
10.2.6 Reverse flanges ... 78
10.2.7 Loose flanges ... 78
10.3 Oval flanges ... 80
10.3.1 Oval flanges in accordance with Figure 54 ... 80
10.3.2 Oval flanges in accordance with Figure 55 ... 82
10.4 Rectangular or square flanges ... 84
10.4.1 Rectangular or square flanges in accordance with Figure 57 ... 84
10.4.2 Rectangular slip-on flanges in accordance with Figure 58 ... 85
10.5 Calculation of the bolt diameter ... 86
10.5.1 Design temperature ... 86
10.5.2 Diameter of the nominal tensile stress ... 86
10.5.3 Load cases ... 86
10.5.4 Safety factors and allowances ... 87

11 Calculation methods for glands ... 87
11.1 Loads ... 87
11.2 Gland bolts ... 88
11.3 Gland flanges ... 88
11.4 Other components ... 88

12 Fatigue ... 88

13 Marking ... 88

Annex A (informative) Characteristic values of gaskets and joints ... 89

Annex B (informative) Calculation procedure ... 102

Annex ZA (informative) !Relationship between this European Standard and the essential requirements of Directive 2014/68/EU aimed to be covered" ... 104

Bibliography ... 105
