DIN EN 15091:2025-11 (E)

Sanitary tapware - Electronic opening and closing sanitary tapware (includes Corrigendum :2025)

Contents

Page

European foreword 5

Introduction 6

1 Scope 7

2 Normative references 10

3 Terms and definitions 11

4 General requirements and testing 11
4.1 Marking 11
4.2 Identification 11
4.3 Materials 11
4.3.1 Chemical and hygienic requirements 11
4.3.2 Exposed surface conditions 11
4.4 Functions 12
4.5 Backflow protection 12
4.6 Electric characteristics and requirements 12
4.6.1 General 12
4.6.2 Electrical safety 12
4.6.3 Electrical operation of solenoid valves 13
4.6.4 Electric strength and insulation resistance of the solenoid valve 13
4.6.5 Operational safety 13
4.7 Leaktightness characteristics 14
4.7.1 General 14
4.7.2 Principle 14
4.7.3 Apparatus 14
4.7.4 Leaktightness of tapware upstream of the obturator 14
4.7.5 Leaktightness of tapware downstream of the obturator with the obturator open 14
4.7.6 Leaktightness tests - Summary table 15
4.8 Pressure resistance characteristics - mechanical performance under pressure 15
4.8.1 General 15
4.8.2 Principle 15
4.8.3 Apparatus 15
4.8.4 Procedure 15
4.8.5 Requirements 16

5 Requirements and testing for tapware 16
5.1 General 16
5.2 Dimensional characteristics 16
5.2.1 General 16
5.2.2 Tap with visible body for horizontal surfaces 16
5.2.3 Taps with visible body for mounting on vertical surfaces 18
5.2.4 In-line tapware with threaded inlet and outlet 18
5.2.5 Concealed tapware for vertical surfaces 19
5.2.6 Mixing valves for horizontal surface 19
5.2.7 Mixing valves with visible body for mounting on vertical surfaces with captive nuts and eccentric unions 21
5.2.8 Mixing valves with opposed inlets 21
5.2.9 Nozzle outlets for use with aerators with integrated flow regulators 22

5.2.10 Special cases ... 22
5.3 Hydraulic characteristics ... 23
5.3.1 General ... 23
5.3.2 Test apparatus for tapware intended for Type 1 water supply systems ... 23
5.3.3 Principle of the flow test ... 27
5.3.4 Requirements ... 28
5.3.5 Cross flow between hot and cold water ... 28
5.4 Water hammer ... 28
5.4.1 Principle of water hammer test ... 28
5.4.2 Test apparatus ... 28
5.4.3 Procedure ... 29
5.4.4 Requirements ... 30
5.5 Endurance ... 30
5.5.1 General ... 30
5.5.2 Principle ... 30
5.5.3 Procedure for single taps ... 30
5.5.4 Procedure for mixers ... 30
5.5.5 Requirements ... 31
5.6 Acoustic characteristics ... 31
5.6.1 General ... 31
5.6.2 Procedure ... 31
5.6.3 Requirements ... 32

6 Requirements and testing for flushing valves for urinals ... 33
6.1 General ... 33
6.2 Definitions ... 33
6.2.1 Single flush urinal valves ... 33
6.2.2 Siphon action flushing urinal valves ... 33
6.2.3 Isolating valves for flushing urinal valves ... 33
6.3 Classification of flushing urinal valves ... 33
6.4 Designation ... 33
6.5 Dimensional characteristics ... 34
6.6 Hydraulic characteristics ... 35
6.6.1 General ... 35
6.6.2 Test method ... 35
6.7 Measurement of water hammer for urinal flushing valves ... 35
6.7.1 Principle of water hammer test ... 35
6.7.2 Test apparatus ... 36
6.7.3 Procedure ... 36
6.7.4 Requirements ... 36
6.8 Mechanical endurance ... 37
6.8.1 General ... 37
6.8.2 Apparatus ... 37
6.8.3 Procedure ... 37
6.8.4 Requirements ... 37

7 Requirements and testing for flushing valves for WCs ... 37
7.1 General ... 37
7.2 Definitions ... 38
7.3 Classification ... 38
7.3.1 General ... 38
7.4 Dimensional characteristics ... 39
7.5 Hydraulic characteristics ... 40
7.5.1 General ... 40
7.5.2 Test method ... 40
7.5.3 Testing of the flow rate/impact force at lower dynamic pressure ... 44
7.5.4 Testing of the flow rate/Volume at lower dynamic pressure ... 44
7.5.5 Testing of flush flow rate/impact force at upper dynamic pressure ... 46
7.5.6 Measurement of water hammer ... 48
7.6 Principle and verification of atmospheric pipe interrupters of WC flushing valves ... 48
7.7 Mechanical endurance ... 48
7.7.1 General ... 48

7.7.2 Procedure 48
7.7.3 Minimum requirements 48
7.8 Acoustic characteristics 48

Annex A (normative) Design of pressure take-off tees 49

Annex B (informative) Potential consequences of use outside the recommended operating limits ... 51

Annex C (informative) Minimum flow rates and test pressures according to application 52
