DIN EN 18191:2026-10 (E)

Industrial valves - Additional requirements for metallic valves for hydrogen application

Contents

Page

European foreword 4

Introduction 5

1 Scope 6

2 Normative references 6

3 Terms and definitions 7

4 General 11

5 Hydrogen service (damage mechanisms) 11
5.1 Metallic materials 11
5.2 Non-metallic materials 11

6 General information on material selection for each hydrogen service (damage mechanism) 12
6.1 Hydrogen in low temperature applications 12
6.2 Hydrogen environmental embrittlement (HEE) 12
6.2.1 General 12
6.2.2 Ferritic steels except austenitic ferritic stainless steels 12
6.2.3 Austenitic stainless steels 13
6.2.4 Austenitic-ferritic steels 13
6.2.5 Aluminium and aluminium alloys 13
6.2.6 Cast irons 13
6.2.7 Steel casting 13
6.2.8 Copper and its alloys 13
6.2.9 Nickel, nickel alloys, titanium and titanium alloys 14
6.2.10 Zirconium 14
6.2.11 Other metallic materials 14
6.3 High temperature hydrogen attack (HTHA) 14
6.4 Hydrogen service with cyclic loads (fatigue) 16
6.4.1 General requirements 16
6.4.2 Fatigue in combination with the other hydrogen services (damage mechanisms) 16
6.5 Non metallic materials 17

7 Additional specifications 17
7.1 Design 17
7.1.1 General 17
7.1.2 Design temperature 17
7.1.3 Hydrogen partial pressure 17
7.1.4 Tightness aspects 17
7.2 Materials 18
7.2.1 General 18
7.2.2 Metallic and non metallic materials 19
7.2.3 Delivery conditions of finished valve components 20
7.3 Manufacture 20
7.3.1 Welding 20
7.3.2 Welding consumables 21
7.3.3 Cold forming 21

7.3.4 Strain hardening 21
7.3.5 Hardness of welds 21
7.3.6 Mechanical properties of welds 21
7.4 Final assessment 21
7.5 Marking 21

Annex A (informative) Harmonized European industrial valve product standards 22

Annex B (informative) Materials for components of metallic industrial valves intended to be used in hydrogen applications 23

Annex C (normative) Tightness and additional testing 54
