DIN EN 12645:2015-02 (E)

Tyre pressure measuring instruments - Devices for inspection of pressure and/or inflation / deflation of tyres for motor vehicles - Metrology, requirements and testing

Contents

Page

Foreword 4

1 Scope 5

2 Normative references 5

3 Terms and definitions 6

4 Categories 8

5 Metrological requirements 10
5.1 Maximum permissible errors 10
5.2 Hysteresis error 10
5.3 Zero 10
5.3.1 Return of the instrument's indication to zero 10
5.3.2 Zero setting 10
5.4 Units 11

6 Technical requirements 11
6.1 Construction 11
6.2 Analog indicating tyre pressure measuring instrument 11
6.2.1 Scale angle 11
6.2.2 Scale interval 11
6.2.3 Scale spacing 11
6.2.4 Index 12
6.3 Digital indicating tyre pressure measuring instrument 12
6.3.1 Scale interval 12
6.3.2 Readability 12
6.4 Additional constructional requirements 12
6.4.1 Mechanical tyre pressure measuring instruments 12
6.4.2 Electronic tyre pressure measuring instrument 12
6.4.3 Electronic and mechanical tyre pressure measuring instruments 13
6.4.4 Preset device 13
6.5 Operating conditions 13
6.5.1 Climatic requirements 13
6.5.2 Mechanical requirements 14
6.5.3 Electromagnetic immunity requirements for electronic tyre pressure measuring instruments (with digital display and/or electronic sensor) 15
6.5.4 Software requirements for electronic tyre pressure measuring instruments 16
6.5.5 Mounting position requirements 17
6.5.6 Kind of pressure indication requirement 17

7 Type approval testing to check for compliance with metrological and technical requirements 17
7.1 General 17
7.2 Determination of accuracy error 18
7.3 Determination of hysteresis error 18
7.4 Determination of return of instrument's indication to zero 18
7.5 Determination of error after/during a disturbance or influence 18
7.6 Climatic tests 18
7.6.1 Determination of the MPE in the rated temperature in service 18

7.6.2 Rated storage temperature 19
7.6.3 Humidity 19
7.6.4 Corrosion test 19
7.7 Mechanical tests 19
7.7.1 Protection against ingress of water and foreign particles (degree of protection) 19
7.7.2 Examination of the durability of the measuring instrument 20
7.7.3 Vibration (random) 20
7.7.4 Free fall 21
7.8 Electromagnetic immunity 21
7.8.1 AC mains voltage variations 21
7.8.2 DC mains voltage variations 21
7.8.3 AC mains power 21
7.8.4 Bursts on AC and DC mains 21
7.8.5 Electrostatic discharges 21
7.8.6 Fast transients on signal and I/O lines 22
7.8.7 Surges on signal and I/O lines 22
7.8.8 DC mains power 22
7.8.9 Ripple on DC input power ports 22
7.8.10 Surges on AC and DC mains lines 22
7.8.11 Radiated radio-frequency electromagnetic fields 22
7.8.12 Conducted radio-frequency fields 22
7.8.13 Voltage variations (if powered by vehicle battery) 22
7.8.14 Electrical transient conduction along supply lines (if powered by vehicle battery) 23
7.8.15 Load dump (if powered by vehicle battery) 23
7.9 Software examination 25
7.10 Mounting position 26
7.11 Determination of pressure sensor -- kind of pressure test 26

8 Inscriptions and marking 26
8.1 Inscriptions 26
8.1.1 Obligatory inscriptions 26
8.1.2 Optional inscriptions 27
8.2 Verification marks and sealing 27

9 Metrological control 27
9.1 Type approval 27
9.2 Initial Verification 27
9.3 Subsequent verification 27
9.4 In-service control 28

Annex A (normative) Correspondence between requirements and tests 29

Annex B (normative) MPE graphics 30

Annex C (informative) Examples of type approval test sequence for multiple samples 32

Annex D (informative) Recommended solutions for special test conditions 35
