Foreword ..... **iv**

Introduction ..... **v**

1 Scope **1**

2 Normative references **1**

3 Terms and definitions **1**

4 Design guidelines **3**

4.1 Actuation of keyless ignition control 3

4.1.1 Actuation for emergency starting – Restarting the propulsion system after unintended engine stall 3

4.1.2 Actuation for starting – Design to avoid accidental starting – Stationary vehicle 3

4.1.3 Actuation for stopping while a vehicle with automatic start/stop is in run mode 3

4.1.4 Actuation for stopping (commercial vehicles only) – Design to avoid accidental stopping - Stationary vehicle 3

4.1.5 Actuation for emergency stopping – Interruption of starting 3

4.2 Starting a propulsion system in case key code carrying device battery runs out 3

4.2.1 Operation methods 4

4.2.2 Instructions in case key code carrying device battery runs out 4

4.3 Alerts and information to the driver 4

4.3.1 Key left in vehicle 4

4.3.2 Missing key code carrying device when starting vehicle propulsion system 4

4.3.3 Ignition mode active at exit 5

4.3.4 Ignition mode active at exit (commercial vehicles only) 5

4.3.5 Key code carrying device leaves the vehicle 5

4.3.6 Power shut off without key code carrying device 6

4.3.7 Power shut off when not in “parked” or without activated parking brake for automatic transmission vehicles 6

4.3.8 Power shut off when not in “parked” or “neutral” for automatic transmission vehicles (commercial vehicles only) 7

4.3.9 Steering not unlocked 7

Annex A (informative) **Keyless ignition control use cases** **8**

Bibliography **11**
