ISO/TS 5474-5:2024-01 (E)

Electrically propelled road vehicles - Functional and safety requirements for power transfer between vehicle and external electric circuit - Part 5: Automatic conductive power transfer

Contents

Page

Foreword ... **iv**

Introduction ... **v**

1 Scope ... **1**

2 Normative references ... **2**

3 Terms and definitions ... **2**

4 System architecture ... **4**
4.1 General ... 4

5 Environmental and operational conditions ... **6**

6 General safety requirements ... **7**
6.1 General ... 7
6.2 Compatibility with interlock of the automatic EV supply equipment ... 7
6.3 Protection against mechanically caused injury ... 7
6.3.1 Limitation of force ... 7
6.3.2 Maximum velocity and energy ... 8

7 Functional requirements ... **8**
7.1 Vehicle position ... 8
7.2 Compatibility with vehicle inlet position detection by the automatic EV supply equipment ... 8
7.3 Manipulator requirements ... 8
7.3.1 General ... 8
7.3.2 Manipulator timing consideration ... 9
7.4 Mating space and package space ... 9
7.4.1 General ... 9
7.4.2 Package space dimensions ... 9
7.5 Manual undocking ... 9
7.6 ACD operation process and communication ... 9
7.7 Mechanical operational requirements ... 10
7.7.1 Mounting position of the vehicle inlet ... 10
7.7.2 Movement/displacement of immobilized vehicle ... 10
7.7.3 Forces during mating and unmating ... 11

8 Owner's manual and markings and instructions ... **11**

9 Test procedure ... **11**

Annex A (informative) **Heavy duty vehicles – movement/displacement of immobilized vehicle and inlet positions** ... **12**

Bibliography ... **14**
