

# ISO 13232-2:2005-12 (E)

**Motorcycles - Test and analysis procedures for research evaluation of rider crash protective devices fitted to motorcycles - Part 2: Definition of impact conditions in relation to accident data**

---

## Contents

	Page
Foreword .....	v
Introduction .....	vi
1 Scope .....	1
2 Normative references .....	1
3 Definitions .....	2
4 Requirements .....	2
4.1 Impact variables .....	2
4.2 Standardized accident configurations .....	3
4.3 Impact configurations for full-scale tests .....	3
5 Analysis methods .....	6
5.1 Using accident data to determine frequency of occurrence of various impact configurations .....	6
5.2 Using accident data to determine frequency of injury by body region and injury type of various impact configurations .....	10
6 Documentation and reporting .....	11
Annex A (normative) Motorcycle accident report .....	12
Annex B (normative) Resulting frequency of occurrence for the combined Los Angeles and Hannover databases .....	15
Annex C (normative) Example accident data .....	18
Annex D (normative) Resulting frequency of injury by body region and injury type for the combined Los Angeles and Hannover databases .....	36
Annex E (informative) Frequency of occurrence data in non-SI units .....	39
Annex F (informative) Rationale for ISO/DIS 13232-2 .....	44
Figures Figure 1 -- Target impact geometries at first MC/OV contact for seven required impact configurations .....	4
Figure 2 -- OV contact point codes .....	6
Figure 3 -- MC contact point codes .....	6
Figure 4 -- Relative heading angle .....	6
Figure 5 -- Diagram of relative heading angle (angle of OV x axis relative to MC x axis, regardless of relative positions of OV and MC) with code numbers .....	8

<b>Figure B.1 -- Geometries occurring for 200 combined Los Angeles and Hannover impact configurations involving 501 accidents .....</b>	<b>16</b>
<b>Figure F.1 -- Distribution of raw relative heading angles for Los Angeles and Hannover accidents ..</b>	<b>50</b>
<b>Figure F.2 -- Examples of geometry reclassification .....</b>	<b>52</b>
<b>Figure F.3 -- Examples of removed configurations .....</b>	<b>52</b>
<b>Tables Table 1 -- Impact configurations for preliminary assessment .....</b>	<b>5</b>
<b>Table 2 -- Heading angle of OV relative to MC .....</b>	<b>7</b>
<b>Table 3 -- OV and MC speed .....</b>	<b>8</b>
<b>Table 4 -- Reclassification for left side OV contact point codes .....</b>	<b>9</b>
<b>Table 5 -- Reclassification of geometry codes .....</b>	<b>9</b>
<b>Table 6 -- List of removed configurations .....</b>	<b>10</b>
<b>Table A.1 -- Injury body region codes .....</b>	<b>14</b>
<b>Table A.2 -- Injury type codes .....</b>	<b>14</b>
<b>Table B.1 -- Opposing vehicle and motorcycle speeds and frequencies of occurrence for 200 combined Los Angeles and Hannover impact configurations .....</b>	<b>17</b>
<b>Table C.1 -- Legend for Los Angeles and Hannover databases .....</b>	<b>19</b>
<b>Table C.2 -- Los Angeles data .....</b>	<b>20</b>
<b>Table C.3 -- Hannover data .....</b>	<b>29</b>
<b>Table D.1 -- Head injury configurations (helmeted concussions, AIS 2) involving 67 accidents .....</b>	<b>36</b>
<b>Table D.2 -- Lower leg injury configurations (fractures, AIS 2) involving 80 accidents .....</b>	<b>37</b>
<b>Table D.3 -- Upper leg injury configurations (fractures, AIS 2) involving 37 accidents .....</b>	<b>38</b>
<b>Table E.1 -- Opposing vehicle and motorcycle speeds and frequencies of occurrence for 200 combined Los Angeles and Hannover impact configurations .....</b>	<b>40</b>
<b>Table E.2 -- Head injury configurations (helmeted concussions, AIS 2) involving 67 accidents .....</b>	<b>41</b>
<b>Table E.3 -- Lower leg injury configurations (fractures, AIS 2) involving 80 accidents .....</b>	<b>42</b>
<b>Table E.4 -- Upper leg injury configurations (fractures, AIS 2) involving 37 accidents .....</b>	<b>43</b>
