ISO 13232-4:2005-12 (E)

Motorcycles - Test and analysis procedures for research evaluation of rider crash protective devices fitted to motorcycles - Part 4: Variables to be measured, instrumentation and measurement procedures

Contents

Page

Foreword vi

Introduction vii

1 Scope 1

2 Normative references 1

3 Definitions, symbols, and abbreviations 2

4 Requirements 3
4.1 Electronically recorded variables 3
4.2 Mechanically recorded variables 5
4.3 Photographic targets to be digitized 5
4.4 Sensor specifications 7
4.5 Internal data acquisition and recording system specifications 15
4.6 High speed photography 18
4.7 Still photography 19

5 Measurement methods 21
5.1 Pre-test measurements related to data reduction 21
5.2 Data reduction 21
5.3 Impact conditions 28
5.4 Frangible bone continuity sensors 32

6 Documentation 32

Annex A (normative) Digitizing the helmet centroid point 35

Annex B (normative) High speed photography field of view requirements 36

Annex C (normative) Computer code for calculation of head linear and angular accelerations 38

Figures Figure 1a -- Nine accelerometer block with accelerometer mounting locations and orientations 8

Figure 1b -- Nine accelerometer block with accelerometer mounting locations and orientations 9

Figure 2 -- Nine accelerometer block mounting base 10

Figure 3 -- Chest potentiometer installation 13

Figure 4 -- Frangible bone strain gauge locations 14

Figure 5 -- Frangible bone break continuity sensor end-to-end wire pattern 16

Figure 6 -- Fz strain gauge calibration 23
