## Motorcycles - Methods for setting running resistance on a chassis dynamometer

---

| <b>Contents</b>       |   | <b>Page</b> |
|-----------------------|---|-------------|
| Foreword .....        |   | iv          |
| Introduction .....    |   | v           |
| 1                     | Scope .....   | 1           |
| 2                     | Normative references .....  | 1           |
| 3                     | Terms and definitions .....   | 1           |
| 4                     | Symbols .....   | 2           |
| 5                     | Test motorcycle, chassis dynamometer and instruments .....                    | 3           |
| 6                     | Required accuracy of measurements .....                                       | 4           |
| 7                     | Road test .....   | 4           |
| 7.1                   | Requirement for road .....  | 4           |
| 7.2                   | Ambient conditions for the road test .....                                    | 4           |
| 7.3                   | Reference speed .....   | 5           |
| 7.4                   | Specified speed .....   | 5           |
| 7.5                   | Coastdown starting speed .....  | 5           |
| 7.6                   | Coastdown time measurement beginning speed and ending speed .....             | 5           |
| 7.7                   | Preparation of test motorcycle .....  | 5           |
| 7.8                   | Rider and riding position .....   | 6           |
| 7.9                   | Measurement of coastdown time .....   | 6           |
| 8                     | Data processing .....   | 8           |
| 8.1                   | Calculation of running resistance force .....                                 | 8           |
| 8.2                   | Running resistance curve fitting .....  | 8           |
| 8.3                   | Target running resistance force for chassis dynamometer setting .....         | 8           |
| 9                     | Chassis dynamometer setting derived from on-road coastdown measurements ..... | 8           |
| 9.1                   | Requirements for the equipment .....  | 8           |
| 9.2                   | Inertia mass setting .....  | 9           |
| 9.3                   | Warming up of chassis dynamometer .....                                       | 9           |
| 9.4                   | Adjustment of tyre pressures .....  | 9           |
| 9.5                   | Motorcycle warming up .....   | 9           |
| 9.6                   | Procedures for setting chassis dynamometer .....                              | 9           |
| 9.7                   | Verification of chassis dynamometer .....                                     | 12          |
| 10                    | Chassis dynamometer setting using the running resistance table .....          | 12          |
| 10.1                  | Applicability .....   | 12          |
| 10.2                  | Requirements for the equipment .....  | 12          |
| 10.3                  | Setting the running resistance force on the chassis dynamometer .....         | 14          |
| 10.4                  | The specified speed for the chassis dynamometer .....                         | 14          |
| 10.5                  | Verification of chassis dynamometer .....                                     | 14          |
| Annex A (normative)   | Motorcycle description .....  | 15          |
| Annex B (normative)   | Chassis dynamometer and instruments description .....                         | 17          |
| Annex C (informative) | Record of coastdown time and chassis dynamometer setting .....                | 19          |
| Bibliography .....    |   | 22          |
