Foreword iv

Introduction v

1 Scope 1

2 Termsanddefinitions 1

3 Application 4
3.1 General 4
3.2 Application considerations 4

4 Structure and procedure of environmental risk assessment 5

5 Exposure assessment 5
5.1 Selection of representative product 5
5.2 Quantificationofreleaserate 6
5.3 Preparing the emission scenario 6
5.4 Determination of PEC 8

6 Hazard assessment 8
6.1 Setting of PNEC 8
6.2 Consideration of assessment factors 10
6.3 Determination of PNEC used for risk characterization 10

7 Risk characterization 11
7.1 General 11
7.2 Data and information 11
7.3 Assessment results 12
7.4 Additional information obtained after last risk characterization 13

8 Risk assessment report 13

Annex A (informative) Systems for estimation of release rates of biocidally active substances from anti- fouling paints 14

Annex B (normative) Details of risk characterization process of an environmental risk assessment for organic biocidally active substances used in anti-fouling systems on ships 17

Annex C (normative) Issues to be considered for risk characterization for inorganic biocidally active substances used in anti-fouling systems on ships 24

Annex D (informative) Examples of guidance for determining data quality 28

Annex E (informative) Examples of testing methods 29

Annex F (informative) Setting of assessment factors (AF) 34

Annex G (normative) Minimum information required for the risk assessment report 40

Annex H (informative) Previously validated models for predicting environmental concentrations 44

Bibliography 46
