

ISO 21716-3:2020 (E)

Ships and marine technology — Bioassay methods for screening anti-fouling paints — Part 3: Mussels

Contents

	Foreword
	Introduction
1	Scope
2	Normative references
3	Terms and definitions
4	Principle
5	Material and apparatus
6	Preparation of the test organism and the test seawater
6.1	General
6.2	Preparation of the test organism
6.3	Preparation of test seawater
7	Preparation of the test panels and control panels
7.1	General
7.2	Preparation of the test panels
7.3	Affixing of mussels to the test panels and control panels
8	Operation of the test
9	Validation of the test
10	Byssus threads formation
10.1	General
10.2	Calculation of the average number of byssus threads formed
10.3	Data treatment and interpretation of the results
11	Test report
Annex A (informative) Statistical analysis — Examples	
A.1	Introduction
A.2	Statistical analysis to compare a test group and a control group
A.2.1	Introduction
A.2.2	One-way analysis of variance[3]–[7]
A.2.3	Indication of the result of one-way ANOVA
A.3	Example of statistical analysis
A.3.1	Introduction
A.3.2	Calculation results
Annex B (informative) General information of mussel, <i>Mytilus galloprovincialis</i>	
B.1	Introduction
B.2	Information of <i>Mytilus galloprovincialis</i>
B.3	Preparation of test organism
B.3.1	Collection of mussels
B.3.2	Acclimatization for mussels
B.3.3	Validation of the acclimatization
Annex C (informative) Identification of <i>Mytilus galloprovincialis</i>
