ISO 21716-2:2020 (E)

Ships and marine technology — Bioassay methods for screening anti-fouling paints — Part 2: Barnacles

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Principle

5 Material and apparatus

6 Preparation of the test organism and the test seawater

6.1 General
6.2 Preparation of the test organism
6.3 Preparation of the test seawater

7 Preparation of the triangular prisms

7.1 General
7.2 Preparation of the test panels and control panels
7.3 Assembly of the triangular prisms

8 Operation of the test

8.1 Cyprid viability test
8.2 Bioassay

9 Validation of the test

9.1 General
9.2 Requirements of the cyprids viability test
9.3 Requirements of the bioassay

10 Settlement rates

10.1 General
10.2 Calculation of the settlement rate for the test panel
10.3 Data treatment and interpretation of the results

11 Test report

Annex A (informative) Statistical analysis — Examples

A.1 Introduction
A.2 Statistical analysis to compare a test group and a control group
A.2.1 Introduction
A.2.2 One-way analysis of variance[4]–[8]
A.2.3 Indication of the result of one-way ANOVA
A.3 Example of statistical analysis
A.3.1 Introduction
A.3.2 Calculation results

Annex B (informative) The barnacle Amphibalanus amphitrite

B.1 Information of Amphibalanus amphitrite
B.2 Studies of Amphibalanus amphitrite

B.3 Preparation of the test organism
B.3.1 Introduction
B.3.2 Collecting and rearing adults
B.3.3 Preparing nauplius larvae
B.3.4 Culturing nauplius larvae
B.3.5 Storing cyprids

Annex C (informative) Life cycle of a barnacle

C.1 Introduction
C.2 Life cycle of Amphibalanus Amphitrite
C.2.1 Nauplius stage (nauplius I-VI)
C.2.2 Cyprid stage
C.2.3 Juvenile stage
C.2.4 Adult stage

Annex D (informative) Materials

Annex E (informative) Identification of adult Amphibalanus amphitrite
