ISO 22785-5:2026-08 (E)

Paints and varnishes - Coatings on plastics and composites - Part 5: Chemical resistance testing

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Sample composition and preparation 1
4.1 Samples 1
4.2 Conditioning 2

5 Methods for testing 2
5.1 General influences 2
5.2 Immersion into the test chemicals or solution 2
5.3 Method using an absorbent medium 2
5.4 Spotting methods 2
5.5 Temperature-gradient oven method 2
5.6 Chemical load of electrical and electronic equipment 3

6 Chemicals for testing 3
6.1 General 3
6.2 Fuels and operating materials 3
6.3 Laboratory chemicals 4
6.4 Biological substances 4
6.5 Substances of daily use 4

7 Evaluation 5
7.1 General 5
7.2 Influence of the plastics substrate on the chemical resistance test 5
7.2.1 General 5
7.2.2 Temperature sensitivity 5
7.2.3 Volume change due to test substances 5
