ISO 22785-1:2026-08 (E)

Paints and varnishes - Coatings on plastics and composites - Part 1: General introduction

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Plastics substrates 3

5 Function of coatings on plastics substrates 3

6 Characteristics of plastics substrates 3
6.1 General 3
6.2 Thermal conductivity of the substrate 4
6.3 Specific heat capacity of the substrate 4
6.4 Transparency of the substrate 4
6.5 Sample thickness 4
6.6 Substrate deformation 4
6.7 Phase transitions 4
6.8 Substrate ageing 4
6.9 Additive migration 5
6.10 Barrier effect of the substrate 5
6.11 Thermal expansion 5
6.12 Volume changes due to water absorption and release 5
6.13 Adhesive strength 5
6.14 Density 5
6.15 Elasticity 5
6.16 Electrical conductivity and magnetic properties 5
6.17 Other substrate characteristics 6

7 Conditioning after coating 6

8 Effect of the differences to metallic substrates 6

Annex A (informative) Overview of typical plastics and their characteristics (extract) 7
