ISO 22899-1:2007-12 (E)

Determination of the resistance to jet fires of passive fire protection materials - Part 1: General requirements

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Principle 3

5 Test configurations 3
5.1 General 3
5.2 Internal configuration 5
5.3 External configuration 5

6 Construction of the test items and substrates 5
6.1 General 5
6.2 Material 5
6.3 Nozzle 5
6.4 Flame re-circulation chamber 6
6.5 Protective chamber 7
6.6 Panel test specimens (internal configuration) 8
6.7 Structural steelwork test specimens (internal configuration) 9
6.8 Tubular section test specimens (external configuration) 12
6.9 Assembly test specimens 13

7 Passive fire protection materials 15
7.1 General 15
7.2 Panel test specimens 15
7.3 Structural steelwork test specimens 16
7.4 Tubular section test specimens 16
7.5 Assembly specimens 17

8 Instrumentation 19
8.1 General 19
8.2 Panel test specimens 19
8.3 Structural steelwork test specimens 19
8.4 Tubular section test specimens 21
8.5 Assembly specimens 22

9 Test apparatus and conditions 24
9.1 Nozzle geometry and position 24
9.2 Fuel 26
9.3 Test environment 26

10 Test procedure 26

11 Repeatability and reproducibility 29

12 Uncertainty of measurement 29

13 Test report 30

14 Practical application of test results 31
14.1 General 31
14.2 Performance criteria 31
14.3 Factors affecting the validity of the test 32

15 Classification (optional) 33
15.1 General 33
15.2 Type of fire 33
15.3 Type of application 33
15.4 Critical temperature rise 33
15.5 Period of resistance 33
15.6 Example of application of the rating 34

Annex A (normative) Methods of fixing thermocouples 35

Annex B (informative) Example test report 37
