

# DIN EN 12812:2008-12 (E)

## Falsework - Performance requirements and general design

---

| <b>Contents</b>       |   | <b>Page</b> |
|-----------------------|---|-------------|
| Foreword .....        |   | 3           |
| Introduction .....    |   | 4           |
| 1                     | Scope .....   | 5           |
| 2                     | Normative references .....                                    | 5           |
| 3                     | Terms and definitions .....                                   | 6           |
| 4                     | Design classes .....  | 7           |
| 4.1                   | General .....   | 7           |
| 4.2                   | Design class A .....  | 7           |
| 4.3                   | Design class B .....  | 7           |
| 5                     | Materials .....   | 8           |
| 5.1                   | General .....   | 8           |
| 5.2                   | Basic requirements for materials .....                        | 8           |
| 5.3                   | Weldability .....   | 8           |
| 6                     | Brief .....   | 8           |
| 7                     | Design requirements .....                                     | 8           |
| 7.1                   | General .....   | 8           |
| 7.2                   | Thickness of material .....                                   | 9           |
| 7.3                   | Connections .....   | 9           |
| 7.4                   | Flexibility of prefabricated support towers .....             | 9           |
| 7.5                   | Foundation .....  | 10          |
| 7.6                   | Towers providing support .....                                | 12          |
| 8                     | Actions .....   | 13          |
| 8.1                   | General .....   | 13          |
| 8.2                   | Direct actions .....  | 13          |
| 8.3                   | Indirect actions .....  | 17          |
| 8.4                   | Other actions "Q9" .....                                      | 17          |
| 8.5                   | Load combinations .....                                       | 17          |
| 9                     | Structural design for classes B1 and B2 .....                 | 18          |
| 9.1                   | Technical documentation .....                                 | 18          |
| 9.2                   | Structural design .....                                       | 20          |
| 9.3                   | Imperfections and boundary conditions .....                   | 23          |
| 9.4                   | Calculation of internal forces .....                          | 30          |
| 9.5                   | Characteristic values of resistance and friction values ..... | 37          |
| Annex A (informative) | Relation with site activities .....                           | 40          |
| Annex B (informative) | .....   | 41          |
| Bibliography .....    |   | 42          |
