## Determination of particle size distribution - Differential electrical mobility analysis for aerosol particles

---

<b>Contents</b>		<b>Page</b>
Foreword .....		iv
Introduction .....		v
1	Scope .....	1
2	Terms and definitions .....	1
3	Symbols .....	4
4	General principle .....	5
4.1	Particle size classification with the DEMC .....	5
4.2	Relationship between electrical mobility and particle size .....	6
4.3	Measurement and data inversion .....	7
4.4	Transfer function of the DEMC .....	8
4.5	The charge distribution function .....	8
5	System and apparatus .....	9
5.1	General configuration .....	9
5.2	Components .....	10
6	Measurement procedures .....	11
6.1	Setup and preparation of the instrument .....	11
6.2	Pre-measurement checks .....	14
6.3	Measurement .....	14
6.4	Maintenance .....	15
7	Periodic tests and calibrations .....	16
7.1	Overview .....	16
7.2	Leak test .....	16
7.3	Zero tests .....	17
7.4	Flow meter calibration .....	17
7.5	Voltage calibration .....	17
7.6	Particle charge conditioner integrity test .....	18
7.7	Calibration for size measurement .....	18
7.8	Size resolution test .....	19
7.9	Number concentration calibration .....	20
8	Reporting of results .....	20
Annex A (informative) Particle charge conditioners and charge distributions .....		21
Annex B (informative) Particle detectors .....		29
Annex C (informative) Slip correction factor .....		33
Annex D (informative) Data inversion .....		37
Annex E (informative) Cylindrical DEMC .....		43
Annex F (informative) Size calibration of a DMAS with step-wise voltage change using particle size standards .....		49
Annex G (informative) Uncertainty .....		52
Bibliography .....		55
