DIN EN ISO 19141:2009-12 (E)

Geographic information - Schema for moving features (ISO 19141:2008)

Contents

Page

Foreword 3

1 Scope 5

2 Conformance 5
2.1 Conformance classes 5
2.2 Requirements 6

3 Normative references 6

4 Terms, definitions, and abbreviated terms 7
4.1 Terms and definitions 7
4.2 Abbreviated terms 9

5 Package - Moving Features 6
5.1 Semantics 10
5.2 Package structure 10
5.3 Class hierarchy 11

6 Package - Geometry Types 13
6.1 Package semantics 13
6.2 Type - MF_OneParamGeometry 13
6.3 Type - MF_TemporalGeometry 15
6.4 Type - MF_Trajectory 16
6.5 Type - MF_TemporalTrajectory 16
6.6 Class - MF_PositionExpression 24
6.7 Type - MF_SecondaryOffset 24
6.8 Type - MF_MeasureFunction 25

7 Package - Prism Geometry 26
7.1 Package structure 26
7.2 CodeList - MF_GlobalAxisName 27
7.3 Type - MF_LocalGeometry 29
7.4 Type - MF_PrismGeometry 31
7.5 Type - MF_RigidTemporalGeometry 32
7.6 Type - MF_RotationMatrix 33
7.7 Type - MF_TemporalOrientation 34

8 Moving features in application schemas 34
8.1 Introduction 34
8.2 Representing the spatial characteristics of moving features 35
8.3 Associations of moving features 35
8.4 Operations of moving features 35

Annex A (normative) Abstract test suite 36

A.1 Application schemas for data transfer 36
A.2 Application schemas for data with operations 36

Annex B (informative) UML Notation 38

B.1 Introduction 38

B.2 Class 38
B.3 Stereotype 38
B.4 Attribute 39
B.5 Operation 39
B.6 Constraint 40
B.7 Note 40
B.8 Association 40
B.9 Role name 40
B.10 Multiplicity 41
B.11 Navigability 41
B.12 Aggregation 41
B.13 Composition 42
B.14 Dependency 42
B.15 Generalization 42
B.16 Realization 43

Annex C (informative) Interpolating between orientations 44

C.1 Introduction 44
C.2 Euler rotations and gimbal lock 44
C.3 Interpolating between two orientation matrices 46
C.4 Interpolating between other orientation representations 48
C.5 Sample interpolation 49

Bibliography 53
