

DIN EN 13381-8:2010-09 (E)

Test methods for determining the contribution to the fire resistance of structural members - Part 8: Applied reactive protection to steel members

Contents		Page
Foreword		5
1	Scope	7
2	Normative references	7
3	Terms, definitions, symbols and units	8
3.1	Terms and definitions	8
3.2	Symbols and units	9
4	Test equipment	11
4.1	General	11
4.2	Furnace	11
4.3	Loading equipment	11
5	Test conditions	11
5.1	General	11
5.2	Support and loading conditions	12
5.2.1	Loaded beams	12
5.2.2	Unloaded beams	12
5.2.3	Loaded columns	12
5.2.4	Unloaded columns	12
5.3	Loading	12
6	Test specimens	13
6.1	General	13
6.2	Size of test specimens	13
6.2.1	Loaded beams	13
6.2.2	Reference sections	14
6.2.3	Loaded column sections	14
6.2.4	Short sections	14
6.2.5	Tall column sections	14
6.3	Construction of steel test specimens	14
6.3.1	Loaded beam test sections	14
6.3.2	Unloaded beam test sections	14
6.3.3	Loaded columns	15
6.3.4	Tall and short columns	15
6.3.5	Loaded, tall and short columns - upper plate	15
6.3.6	Application of the fire protection material	15
6.4	Composition of test specimen component materials - Steel sections	15
6.5	Properties of test specimen component materials - Fire protection materials	15
6.5.1	General	15
6.5.2	Thickness of applied reactive protection material	16
6.6	Selection of test specimens	16
6.6.1	Principle of selection	16
6.6.2	Sections required for correction for stickability	19
6.6.3	Sections required for thermal analysis	19
7	Installation of the test specimens	21
7.1	Loaded beam	21
7.2	Unloaded beams	22

7.3	Loaded columns	22
7.4	Unloaded columns	22
7.5	Test specimen installation patterns	23
7.6	Furnace Load	23
8	Conditioning of the test specimens	23
9	Application of instrumentation	23
9.1	General	23
9.2	Instrumentation for measurement and control of furnace temperature	23
9.2.1	General	23
9.2.2	Furnace temperature in the region of loaded beam test specimens	23
9.2.3	Furnace temperature in region of loaded column test specimens	24
9.2.4	Furnace temperature in the region of unloaded test specimens	24
9.3	Instrumentation for measurement of steel temperatures	25
9.3.1	General	25
9.3.2	Loaded beams	25
9.3.3	Unloaded beams	25
9.3.4	Loaded columns and unloaded tall columns	25
9.3.5	Unloaded short columns	26
9.4	Instrumentation for the measurement of pressure	26
9.5	Instrumentation for the measurement of deformation	26
9.6	Instrumentation for the measurement of load	26
10	Test procedure	26
10.1	General	26
10.2	Furnace temperature and pressure	26
10.3	Application and control of load	26
10.3.1	Loaded beams	26
10.3.2	Loaded columns	27
10.4	Temperature of steelwork	27
10.5	Deflection	27
10.6	Observations	27
10.7	Termination of test	27
11	Test results	27
11.1	Acceptability of test results	27
11.2	Presentation of test results	28
12	Test report	29
13	Assessment	30
13.1	General	30
13.2	Temperature data	30
13.3	Correction for discrepancy in stickability and insulation performance over the thickness range tested	30
13.4	Assessment procedures for thermal performance	30
13.5	Acceptability of the assessment method used and the resulting analysis - Criteria for acceptability	31
14	Report of the assessment	31
15	Limits of the applicability of the results of the assessment	32
Annex A (normative) Test method to the smouldering fire (slow heating curve)		48
A.1	Introduction	48
A.2	Test equipment	48
A.3	Test specimens	48
A.4	Termination of test	49
A.5	Evaluation of the results	49

Annex B (normative) Measurement of properties of fire protection materials	51
B.1 Introduction	51
B.2 Thickness of fire protection materials	51
B.2.1 Dry film thickness	51
B.2.2 Measuring positions	51
B.3 Identification	52
Annex C (normative) Fixing of thermocouples to steel work and routing of cables	53
C.1 Introduction	53
C.2 Types of thermocouples	53
C.3 Fixing of thermocouples	53
C.4 Routing of thermocouple wires	53
C.5 Connection of thermocouples	54
C.6 Thermocouple failures	54
Annex D (normative) Correction of data/Nominal thickness	55
D.1 Correction of data	55
D.1.1 Procedure	55
D.1.2 Method	56
D.2 Nominal thickness - Graphical method	58
Annex E (normative) Methods of Assessment of Fire Protection System Performance	59
E.1 General	59
E.2 Graphical Approach	59
E.2.1 General	59
E.2.2 Input Data	59
E.2.3 Step 1 - Nominal Thickness	60
E.2.4 Step 2 - Graph	60
E.2.5 Step 3 - Line Plotting	61
E.2.6 Step 4 - Compliance with 13.5	61
E.2.7 Step 5 - Deriving Intercepts	63
E.2.8 Step 6 - Linear Interpolation	64
E.2.9 Step 7 - Reporting of Results	65
E.3 Differential Equation Analysis (variable approach) Methodology	65
E.3.1 General	65
E.3.2 Input Data	65
E.3.3 Step 1 - Basic equation	65
E.3.4 Step 2 - Input data	67
E.3.5 Step 3 - Preparation of input data	67
E.3.6 Step 4 - Determination of elementary variable conductivities from each short column	67
E.3.7 Step 5 - Determination of the temperature of protective material	67
E.3.8 Step 6 - Transformation of conductivities	67
E.3.9 Step 7 - Determination of average variable conductivities for the protective material	68
E.3.10 Step 8 - Verification of the fitness of average variable conductivities	68
E.3.11 Step 9 - Adjustment of characteristic variable conductivities	69
E.3.12 Step 10 - Presentation of the results	69
E.3.13 Step 11 - Reporting of the results	70
E.4 Differential Equation Analysis (constant approach) Methodology	70
E.4.1 General	70
E.4.2 Input Data	70
E.5 Numerical regression analysis	71
E.5.1 General	71
E.5.2 Input Data	72
E.5.3 Basic Equation	72
E.5.4 Steps 1 to 5: Use of input data from test results	72
Annex F (normative) Tables of Section Sizes	74

Annex G (normative) Applied Load in a Loaded I or H Section Beam Test	76
G.1 General	76
G.2 Calculation of applied moment	76
G.3 Calculation of jack loads	76
G.4 Central bending moments	77
Bibliography	80
