DIN EN ISO 1716:2010-11 (E)

Reaction to fire tests for products - Determination of the gross heat of combustion (calorific value) (ISO 1716:2010)

Contents

Page

Foreword 3

1 Scope 4

2 Normative references 4

3 Terms and definitions 4

4 Principle 6

5 Test apparatus 6
5.1 General 6
5.2 Calorimetric bomb, constructed with the following characteristics 6
5.3 Calorimeter 6

6 Reagents and materials 7

7 Test specimens 8
7.1 General 8
7.2 Sampling 8
7.3 Determination of surface density 9
7.4 Grinding 9
7.5 Type of specimen 9
7.6 Conditioning 9
7.7 Number of test specimens 9
7.8 Determination of mass 9
7.9 Crucible method 10
7.10 "Cigarette" method 10

8 Test procedure 11
8.1 General 11
8.2 Calibration procedure 11
8.3 Standard test procedure 11

9 Expression of results 12
9.1 Corrections for manual apparatus 12
9.2 Corrections for isothermal calorimeter (see Annex C) 13
9.3 Calculation of the gross heat of combustion of the specimen 13
9.4 Calculation of the gross heat of combustion of the product 14

10 Test report 15

11 Validity of test results 16

Annex A (normative) Calculation of net heat of combustion 21

Annex B (informative) Precision of test method 22

Annex C (informative) Calculation by graph of the corrective term, c, necessary because of the cooling of the calorimeter 25

Annex D (informative) Example of determination of the gross heat of combustion of a non-homogeneous product 26

Bibliography 29
