DIN EN 1991-1-4:2010-12 (E)

Eurocode 1: Actions on structures – Part 1-4: General actions – Wind actions (includes Amendment A1:2010 + Corrigendum AC:2010) English translation of DIN EN 1991-1-4:2010-12

Content	S	Page
Foreword to	D EN 1991-1-4:2005	5
A) Forewor	d to EN 1991-1-4:2005/A1:2010	5
Section 1	General	10
1.1 Scop	A	10
1.2 Norm	ative references	11
	mntions	11
1.4 Distir	iction between Principles and Application Rules	11
1.5 Desig	in assisted by testing and measurements	11
1 6 Defin	itions	11
1.7 Symb	ols	12
Section 2		17
Section 2		17
Section 3	Modelling of wind actions	18
3.1 Natur	e	18
3.2 Repre	esentations of wind actions	18
3.3 Class	ification of wind actions	18
3.4 Chara	acteristic values	18
3.5 Mode	ls	18
Section 4	Wind velocity and velocity pressure	19
4.1 Basis	for calculation	19
4.2 Basic	values	19
4.3 Mean	wind	20
4.3.1	Variation with height	20
4.3.2	Terrain roughness	20
4.3.3	Terrain orography	22
4.3.4	Large and considerably higher neighbouring structures	22
4.3.5	Closely spaced buildings and obstacles	23
4.4 Wind	turbulence	23
4.5 Peak	velocity pressure	23
Section 5	Wind actions	25
5.1 Gene	ral	25
5.2 Wind	pressure on surfaces	25
5.3 Wind	forces	26
Section 6	Structural factor c _S cd	29
6.1 Gene	ral	29
6.2 Deter	mination of CeCd	29
6 3 Detai		29
6.3.1	Structural factor c.c.	29
6.3.2	Serviceability assessments	31
6.3.3	Wake buffeting	31
Section 7	Prossure and force coefficients	22
7 1 Gono	ral	32
7.1 Gene 7 1 1	Choice of aerodynamic coefficient	32
7.1.1	Asymmetric and counteracting pressures and forces	32
7.1.2	Effects of ice and snow	22
7 2 Pross	sure coefficients for huildings	34
7 2 1 General		21
7 2 2	Vertical walls of rectangular plan buildings	37
7 2 3	Flat roofs	38
724	Monopitch roofs	Δ1
725	Duopitch roofs	44
726	Hipped roofs	48
7 2 7	Multispan roofs	40
7.2.8	Vaulted roofs and domes	51

7.2.9 Internal pressure 7.2.10 Pressure on walls or roofs with more than one skin 7.3 Canopy roofs	52 54 55
7.4 Free-standing walls, parapets, fences and signboards	62
7.4.1 Free-standing walls and parapets	62
7.4.2 Shelter factors for walls and fences	64
7.4.3 Signboards 7.5 Eriction coefficients	04 65
7.5 Friction coefficients 7.6 Structural elements with rectangular sections	66
7.7 Structural elements with sharp edged section	68
7.8 Structural elements with regular polygonal section	68
7.9 Circular cylinders	70
7.9.1 External pressure coefficients	70
7.9.2 Force coefficients	72
7.9.3 Force coefficients for vertical cylinders in a row arrangement	75
7.10 Spheres	75
7.11 Lattice structures and scattoldings	70
7.12 Flags 7.13 Effective clanderness 3 and end effect factor w	/9 01
7.15 Effective signation of λ and end-effect factor ψ_{λ}	01
Section 8 Wind actions on bridges	83
8.1 General	83
8.2 Choice of the response calculation procedure	86
8.3.1 Force coefficients in v-direction (general method)	00 86
8.3.2 Force in x-direction – Simplified Method	89
8.3.3 Wind forces on bridge decks in z-direction	90
8.3.4 Wind forces on bridge decks in y-direction	91
8.4 Bridge piers	92
8.4.1 Wind directions and design situations	92
8.4.2 Wind effects on piers	92
Annex A (informative) Terrain effects A.1 Illustrations of the upper roughness of each terrain category A.2 Transition between roughness categories 0, I, II, III and IV A.3 Numerical calculation of orography coefficients A.4 Neighbouring structures A.5 Displacement height	93 93 94 96 101 102
Annex B (informative) Procedure 1 for determining the structural factor c _s c _d B.1 Wind turbulence	103 103
B.2 Structural factor	104
B.3 Number of loads for dynamic response	106
B.4 Service displacement and accelerations for serviceability assessments of a vertical structure	106
Annex C (informative) Procedure 2 for determining the structural factor $c_s c_d$	109
C.1 Wind turbulence	109
C.2 Structural factor	109
C.3 Number of loads for dynamic response C.4 Service displacement and accelerations for serviceability assessments	110
C.4 Service displacement and accelerations for serviceability assessments	110
Annex D (informative) $c_s c_d$ values for different types of structures	112
F 1 Vortex shedding	115
E.1.1 General	115
E.1.2 Criteria for vortex shedding	115
E.1.3 Basic parameters for vortex shedding	116
E.1.4 Vortex shedding action	119
E.1.5 Calculation of the cross wind amplitude	119
E.1.6 Measures against vortex induced vibrations	129
E.2 Galloping	130
E.2.1 General	130

E.2.2 Onset wind velocity	130
E.2.3 Classical galloping of coupled cylinders	132
E.3 Interference galloping of two or more free standing cylinders	134
E.4 Divergence and Flutter	135
E.4.1 General	135
E.4.2 Criteria for plate-like structures	135
E.4.3 Divergency velocity	135
Annex F (informative) Dynamic characteristics of structures	137
F.1 General	137
F.2 Fundamental frequency	137
F.3 Fundamental mode shape	142
F.4 Equivalent mass	144
F.5 Logarithmic decrement of damping	144
Bibliography	147
