ISO/TR 26368:2012-05 (E)

Environmental damage limitation from fire-fighting water run-off

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Emission to the aquatic environment 2
4.1 Contamination pathways 2
4.2 Control of firefighting water runoff to surface water and ground water 3
4.3 Permanent or portable tanks are another option for firewater retention 4

5 Environmental damage limitation 4
5.1 Initial risk assessment 4
5.2 Risk reduction strategies 4
5.3 Firefighting tactics 5
5.4 Factors in assessing the volume of water runoff 6

6 Rules to design water basins 7
6.1 Characteristics to design the water basins 7
6.2 Common characteristics of water basins 8
6.3 Methods to define water basin capacity 9

Annex A (informative) Example case histories 14

Annex B (informative) Overview of water basin definition methods 17

Annex C (informative) Assessing water runoff containment capacities in existing facilities and facilities under development using riskbased approach -- Australian method 19
