

ISO 13099-1:2012-06 (E)

Colloidal systems - Methods for zeta-potential determination - Part 1: Electroacoustic and electrokinetic phenomena

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Terms and definitions	1
2.1	Electric double layer	1
2.2	Electrokinetic phenomena	2
2.3	Electroacoustic phenomena	4
3	Symbols	5
4	Theory: general comments	6
5	Elementary theories, Smoluchowski's limit for electrokinetics	7
5.1	General	7
5.2	Electrophoresis	7
5.3	Electroosmosis	8
5.4	Streaming current or potential	8
5.5	Sedimentation potential or current	8
6	Elementary theories, Smoluchowski's limit for electroacoustics	8
6.1	General	8
6.2	O'Brien's theory for dynamic electrophoretic mobility	9
6.3	Smoluchowski limit theory for dynamic electrophoretic mobility	9
7	Advanced theories	10
8	Equilibrium dilution and other sample modifications	10
Annex A (informative) Electric double layer models		12
Annex B (informative) Surface conductivity		18
Annex C (informative) Debye length		20
Annex D (informative) Advanced electrophoretic theories		21
Annex E (informative) Advanced electroacoustic theories		24
Bibliography		26
