

ISO/TR 10295-3:2012-08 (E)

Fire tests for building elements and components - Fire testing of service installations - Part 3: Single component penetration seals - Guidance on the construction and use of test configurations and simulated services to characterise sealing materials

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	2
3	Terms and definitions	2
4	Test equipment	3
5	General performance criteria	3
6	Guidance on test configurations and procedures	4
7	Test procedures	4
7.1	Test configuration A -- Size of unsupported free area of penetration seal	5
7.2	Test configuration B -- Thermal diffusivity of the conductor / penetration	6
7.3	Test configuration C	7
7.4	Test configuration D -- When multiple simulated services are being tested	8
7.5	Test procedure E	8
7.6	Test procedure F	8
7.7	Test procedure G	9
7.8	Test procedure H	9
8	Deriving the field of application by judgemental analysis	9
8.1	Analysis using test configuration A	9
8.2	Analysis using test configuration B	9
8.3	Analysis using test configuration C	10
8.4	Analysis using test configuration D	10
9	Deriving the field of application by mathematical analysis	10
9.1	Use of the 3-D interpolation method to predict the extended field of application	10
Annex A (informative) Determining the extended field of application		12
Annex B (informative) Example of the application of the principles of 3-D interpolation to the establishment of the extended application of penetrating sealing system		13
Annex C (informative) 3-D interpolation method of analysis		16
