DIN CEN/TR 16639:2014-06 (E)

Use of k-value concept, equivalent concrete perfor mance concept and equivalent performance of combinations concept; English version CEN/TR 16639:2014

Contents

Page

Foreword 3

0 Introduction 4
0.1 General 4
0.2 Task Group 5 4
0.3 *k*-value concept 4
0.4 ECPC and EPCC 4

1 Scope 5

2 *k*-value concept 6
2.1 *k*-values in EN 206:2013 6
2.2 Use of *k*-values in the member states 6
2.3 Procedure for using the *k*-value concept 7
2.3.1 Principle of the *k*-value concept 7
2.3.2 Method of calculation 8
2.3.3 Example for determination of *k* 10
2.3.4 Further recommendations for the application of the *k*-value 12
2.3.5 Example for establishing a general concept using the *k*-value concept 12
2.4 Application of *k*-value concept by the users 14
2.4.1 General 14
2.4.2 Example for concrete mix design applying the *k*-value concept 14

3 Equivalent concrete performance concept (ECPC) 15
3.1 General 15
3.2 Dutch Method 15
3.2.1 Definitions 15
3.2.2 Procedure and criteria for assessment of durability aspects 17
3.2.3 Test methods 22
3.2.4 Quality assurance 23
3.3 Recommendations for the application of ECPC 24
3.4 Additional information to the use of the Dutch method 25

4 Equivalent performance of combinations concept 26
4.1 General 26
4.2 UK method 27
4.3 Irish method 28
4.4 Portuguese method 29
4.5 Recommendation for application of EPCC 30
4.6 Additional information the UK method 30
4.6.1 Annexes from BS 8500-2 relating to conformity control of combinations 30
4.6.2 How this works when specifying concrete to BS 8500 35
4.7 Additional information to the Irish method 39
4.8 Additional information to the Portuguese method 41

Annex A (informative) Replies to the *k* -value questionnaire of CEN/TC 104/SC 1/TG 5 47

A.1 General questionnaire 47

A.2 Addition to answer of Finland 57
