

DIN CEN/TR 16639:2014-06 (E)

Use of k -value concept, equivalent concrete performance concept and equivalent performance of combinations concept; English version CEN/TR 16639:2014

Contents	Page
Foreword.....	3
0 Introduction	4
0.1 General.....	4
0.2 Task Group 5.....	4
0.3 k -value concept.....	4
0.4 ECPC and EPCC.....	4
1 Scope	5
2 k -value concept.....	6
2.1 k -values in EN 206:2013	6
2.2 Use of k -values in the member states	6
2.3 Procedure for using the k -value concept	7
2.3.1 Principle of the k -value concept.....	7
2.3.2 Method of calculation	8
2.3.3 Example for determination of k	10
2.3.4 Further recommendations for the application of the k -value.....	12
2.3.5 Example for establishing a general concept using the k -value concept	12
2.4 Application of k -value concept by the users	14
2.4.1 General.....	14
2.4.2 Example for concrete mix design applying the k -value concept.....	14
3 Equivalent concrete performance concept (ECPC)	15
3.1 General.....	15
3.2 Dutch Method	15
3.2.1 Definitions	15
3.2.2 Procedure and criteria for assessment of durability aspects	17
3.2.3 Test methods.....	22
3.2.4 Quality assurance	23
3.3 Recommendations for the application of ECPC	24
3.4 Additional information to the use of the Dutch method	25
4 Equivalent performance of combinations concept	26
4.1 General.....	26
4.2 UK method.....	27
4.3 Irish method	28
4.4 Portuguese method	29
4.5 Recommendation for application of EPCC	30
4.6 Additional information the UK method.....	30
4.6.1 Annexes from BS 8500-2 relating to conformity control of combinations	30
4.6.2 How this works when specifying concrete to BS 8500.....	35
4.7 Additional information to the Irish method.....	39
4.8 Additional information to the Portuguese method.....	41
Annex A (informative) Replies to the k -value questionnaire of CEN/TC 104/SC 1/TG 5.....	47
A.1 General questionnaire	47
A.2 Addition to answer of Finland	57
Bibliography	60
