

DIN CEN/TR 16639:2014-06 (E)

Use of k -value concept, equivalent concrete performance concept and equivalent performance of combinations concept; English version CEN/TR 16639:2014

Contents		Page
Foreword.....		3
0 Introduction		4
0.1 General.....		4
0.2 Task Group 5.....		4
0.3 k -value concept.....		4
0.4 ECPC and EPCC.....		4
1 Scope		5
2 k -value concept.....		6
2.1 k -values in EN 206:2013		6
2.2 Use of k -values in the member states		6
2.3 Procedure for using the k -value concept		7
2.3.1 Principle of the k -value concept.....		7
2.3.2 Method of calculation		8
2.3.3 Example for determination of k		10
2.3.4 Further recommendations for the application of the k -value.....		12
2.3.5 Example for establishing a general concept using the k -value concept		12
2.4 Application of k -value concept by the users		14
2.4.1 General.....		14
2.4.2 Example for concrete mix design applying the k -value concept.....		14
3 Equivalent concrete performance concept (ECPC)		15
3.1 General.....		15
3.2 Dutch Method		15
3.2.1 Definitions		15
3.2.2 Procedure and criteria for assessment of durability aspects		17
3.2.3 Test methods.....		22
3.2.4 Quality assurance		23
3.3 Recommendations for the application of ECPC		24
3.4 Additional information to the use of the Dutch method		25
4 Equivalent performance of combinations concept.....		26
4.1 General.....		26
4.2 UK method.....		27
4.3 Irish method		28
4.4 Portuguese method		29
4.5 Recommendation for application of EPCC		30
4.6 Additional information the UK method.....		30
4.6.1 Annexes from BS 8500-2 relating to conformity control of combinations		30
4.6.2 How this works when specifying concrete to BS 8500.....		35
4.7 Additional information to the Irish method.....		39
4.8 Additional information to the Portuguese method.....		41
Annex A (informative) Replies to the k -value questionnaire of CEN/TC 104/SC 1/TG 5.....		47
A.1 General questionnaire		47
A.2 Addition to answer of Finland		57
Bibliography		60
