DIN EN 13381-5:2015-02 (E)

Test methods for determining the contribution to the fire resistance of structural members - P art 5: Applied protection to concrete/profiled sheet steel composite member

Contents

Page

Foreword 4

1 Scope 5

2 Normative references 5

3 Terms and definitions, symbols and units 6
3.1 Terms and definitions 6
3.2 Symbols and units 8

4 Test equipment 9
4.1 General 9
4.2 Furnace 9
4.3 Loading equipment 9

5 Test conditions 9
5.1 General 9
5.2 Support and restraint conditions 10
5.3 Loading conditions 10

6 Test specimens 10
6.1 Number of test specimens 10
6.2 Size of test specimens 11
6.3 Construction of test specimens 11
6.4 Composition of test specimen component materials 13
6.5 Properties of test materials 14
6.6 Verification of the test specimen 15

7 Installation of the test construction 15

8 Conditioning of the test construction 15

9 Application of instrumentation 16
9.1 General 16
9.2 Instrumentation for measurement of furnace temperature 16
9.3 Instrumentation for measurement of test specimen temperature 16
9.4 Instrumentation for measurement of pressure 17
9.5 Instrumentation for measurement of deformation 17
9.6 Instrumentation for measurement of applied load 17

10 Test procedure 17
10.1 General 17
10.2 Furnace temperature and pressure 17
10.3 Application and control of load 17
10.4 Temperature of test specimen 17
10.5 Deformation 18
10.6 Observations 18
10.7 Termination of test 18

11 Test results ... 18
11.1 Acceptability of test results ... 18
11.2 Presentation of test results ... 19

12 Test report ... 19

13 Assessment ... 20
13.1 General ... 20
13.2 Profiled steel sheet temperature ... 21
13.3 Equivalent thickness of concrete ... 21
13.4 Limiting exposure time ... 22
13.5 Insulation ... 22

14 Report of the assessment ... 22

15 Limits of applicability of the results of the assessment ... 23

16 Additional limits of applicability of the results of the assessment for suspended ceilings used as protection system ... 25
16.1 Height of the cavity ... 25
16.2 Exposed width of test specimen ... 25
16.3 Properties of the horizontal protective membrane ... 25
16.4 Size of panels within the horizontal protective membrane ... 25
16.5 Fixtures and fittings ... 25
16.6 Gaps between grid members and test frame or walls ... 25

Annex A (normative) Test method to the smouldering fire or slow heating curve ... 32

A.1 General ... 32
A.2 Test conditions ... 32
A.3 Termination of the test ... 32
A.4 Evaluation of the results ... 33

Annex B (normative) Measurement of properties of fire protection materials ... 35

B.1 General ... 35
B.2 Thickness of fire protection materials ... 35
B.3 Density of applied fire protection materials ... 36
B.4 Moisture content of applied fire protection materials ... 36

Bibliography ... 38
