DIN EN 13381-3:2015-06 (E)

Test methods for determining the contribution to the fire resistance of structural members - Part 3: Applied protection to concrete members

Contents

Page

Foreword 5

1 Scope 7

2 Normative references 7

3 Terms and definitions, symbols and units 8
3.1 Terms and definitions 8
3.2 Symbols and units 9

4 Test equipment 10
4.1 General 10
4.2 Furnace 10
4.3 Loading equipment 10

5 Test conditions 10
5.1 General 10
5.2 Support and restraint conditions 11
5.2.1 Standard support and restraint conditions 11
5.2.2 Other support and restraint conditions 11
5.3 Loading conditions 11

6 Test specimens 12
6.1 Type and number of test specimens 12
6.1.1 Type of test specimens 12
6.1.2 Number of test specimens 12
6.2 Size of test specimens 13
6.2.1 Concrete slabs 13
6.2.2 Concrete beams 13
6.3 Construction of concrete test specimens 14
6.3.1 Concrete slab test members 14
6.3.2 Concrete beam test members 14
6.3.3 Fabrication of concrete test members 14
6.3.4 Application of fire protection material (except ceiling) to concrete test member 15
6.3.5 Installation of a ceiling below the concrete slab 15
6.4 Composition of test specimen component materials 16
6.4.1 Concrete 16
6.4.2 Steel reinforcement 16
6.4.3 Fire protection system 16
6.5 Properties of test materials 16
6.5.1 General 16
6.5.2 Concrete 16
6.5.3 Steel reinforcement 17
6.5.4 Fire protection materials 17
6.6 Verification of the test specimen 17

7 Installation of the test construction 18
7.1 Concrete large slab test specimens 18
7.2 Concrete small slab test specimens 18
7.3 Concrete beam test specimens 18

8 Conditioning 18

9 Application of instrumentation 19
9.1 General 19
9.2 Instrumentation for measurement of furnace temperature 19
9.2.1 Slab specimens 19
9.2.2 Beam specimens 19
9.3 Instrumentation for the measurement of test specimen temperature 19
9.3.1 General 19
9.3.2 Large and small concrete slab test specimens 20
9.3.3 Beams 20
9.3.4 Equivalent locations as referred to in 11.2 are: 21
9.4 Instrumentation for the measurement of pressure 22
9.5 Instrumentation for the measurement of deformation 22
9.6 Instrumentation for the measurement of applied load 22

10 Test procedure 22
10.1 General 22
10.2 Furnace temperature and pressure 22
10.3 Application and control of load 22
10.4 Temperature of test specimen 23
10.5 Deformation 23
10.6 Observations 23
10.7 Termination of test 23

11 Test results 23
11.1 Acceptability of test results 23
11.2 Presentation of test results 24

12 Test report 25

13 Assessment 25
13.1 General 25
13.2 Concrete slabs 26
13.3 Concrete beams 26
13.4 Insulation 27
13.5 Stickability 27
13.6 Equivalent thickness of concrete 27

14 Report of the assessment 27

15 Limits of applicability of the results of the assessment 28

16 Additional limits of applicability of the results of the assessment for suspended ceilings used as protection system 30
16.1 Height of the cavity 30
16.2 Exposed width of test specimen 30
16.3 Properties of the horizontal protective membrane 30
16.4 Size of panels within the horizontal protective membrane 30
16.5 Fixtures and fittings 30
16.6 Gaps between grid members and test frame or walls 31

Annex A (normative) Test method to the smouldering fire or slow heating curve 44

A.1 Introduction 44
A.2 Evaluation of the results 44

Annex B (normative) Measurement of properties of fire protection materials 46

B.1 General 46
B.2 Thickness of fire protection materials 46
B.3 Density of applied fire protection materials 47

B.3.1 General 47
B.4 Moisture content of applied fire protection materials 48

Annex C (normative) Equivalent thickness of concrete 49

C.1 General 49
C.1.1 General 49
C.1.2 Equivalent thickness of concrete slabs - preliminary data collection 49
C.1.3 Equivalent thickness of concrete beams - preliminary data collection 49
C.2 Equivalent thickness of concrete slabs and beams - assessment methodology 50

Annex D (normative) Calculation of stresses in standard concrete structures 58

D.1 General 58
D.2 Relevant concrete structures 58
D.3 Distribution of stresses across the section of the concrete structures 58
D.4 Mechanical study 59
D.4.1 Equilibrium of external forces 59
D.4.2 Determination of the position of the neutral axis (x) 59
D.4.3 Determination of the quadratic modulus 60
D.4.4 Determination of stresses in reinforcement bars and concrete 60

Annex E (informative) Calculation of the load to apply on concrete member 63

E.1 Remind and scheme 63
E.2 Calculation of the force of the spring for a loaded beam 63
E.3 Calculation of the force of the spring for a loaded large slab 64

Bibliography 66
