## General principles on reliability for structures

---

| <b>Contents</b>              |   | <b>Page</b> |
|------------------------------|---|-------------|
| <b>6</b>                     | <b>Uncertainty representation and modelling</b> .....             | <b>25</b>   |
| 6.1                          | General .....   | 25          |
| 6.1.1                        | Types of uncertainty .....  | 25          |
| 6.1.2                        | Treatment of uncertainty .....                                    | 26          |
| 6.1.3                        | Interpretation of probability .....                               | 26          |
| 6.1.4                        | Probabilistic models .....  | 26          |
| 6.1.5                        | Population/outcome space .....                                    | 26          |
| 6.1.6                        | Hierarchical modelling of uncertainty .....                       | 27          |
| 6.2                          | Models for structural analysis .....                              | 27          |
| 6.2.1                        | General .....   | 27          |
| 6.2.2                        | Actions and environmental influences .....                        | 28          |
| 6.2.3                        | Geometrical properties .....                                      | 30          |
| 6.2.4                        | Material properties .....   | 30          |
| 6.2.5                        | Responses and resistances .....                                   | 31          |
| 6.3                          | Models for consequences .....                                     | 33          |
| 6.4                          | Model uncertainty .....   | 34          |
| 6.5                          | Experimental models .....   | 34          |
| 6.6                          | Updating of probabilistic models .....                            | 35          |
| <b>7</b>                     | <b>Risk-informed decision making</b> .....                        | <b>35</b>   |
| 7.1                          | General .....   | 35          |
| 7.2                          | System identification .....                                       | 35          |
| 7.3                          | System modelling .....  | 36          |
| 7.4                          | Risk quantification .....   | 36          |
| 7.5                          | Decision optimization and risk acceptance .....                   | 36          |
| <b>8</b>                     | <b>Reliability-based decision making</b> .....                    | <b>37</b>   |
| 8.1                          | General .....   | 37          |
| 8.2                          | Decisions based on updated probability measures .....             | 38          |
| 8.3                          | Systems reliability versus component reliability .....            | 38          |
| 8.4                          | Target failure probabilities .....                                | 39          |
| 8.5                          | Calculation of the probability of failure .....                   | 39          |
| 8.5.1                        | General .....   | 39          |
| 8.5.2                        | Time-invariant reliability problems .....                         | 40          |
| 8.5.3                        | Transformation of time-variant into time-invariant problems ..... | 40          |
| 8.5.4                        | Out-crossing approach .....                                       | 40          |
| 8.6                          | Implementation of probability-based design .....                  | 41          |
| <b>9</b>                     | <b>Semi-probabilistic method</b> .....                            | <b>41</b>   |
| 9.1                          | General .....   | 41          |
| 9.2                          | Basic principles .....  | 41          |
| 9.3                          | Representative and characteristic values .....                    | 42          |
| 9.3.1                        | Actions .....   | 42          |
| 9.3.2                        | Resistances .....   | 43          |
| 9.4                          | Safety formats .....  | 43          |
| 9.4.1                        | General .....   | 43          |
| 9.4.2                        | Partial factor method .....                                       | 44          |
| 9.4.3                        | The design value method .....                                     | 46          |
| 9.5                          | Verification in case of cumulative damage .....                   | 47          |
| <b>Annex A (informative)</b> | <b>Quality management</b> .....                                   | <b>48</b>   |

|   |            |
|---|------------|
| <b>Annex B (informative) Lifetime management of structural integrity .....</b>          | <b>55</b>  |
| <b>Annex C (informative) Design based on observations and experimental models .....</b> | <b>62</b>  |
| <b>Annex D (informative) Reliability of geotechnical structures .....</b>               | <b>71</b>  |
| <b>Annex E (informative) Code calibration .....</b>                                     | <b>79</b>  |
| <b>Contents Page Annex F (informative) Structural robustness .....</b>                  | <b>88</b>  |
| <b>Annex G (informative) Optimization and criterion on life safety .....</b>            | <b>100</b> |
| <b>Bibliography .....</b>   | <b>110</b> |
