DIN EN 14358:2016-11 (E)

Timber structures - Calculation and verification of characteristic values

Contents

Page

European foreword 3

1 Scope 4

2 Symbols 4

3 Calculation of characteristic properties from test results in the frame of initial type testing 5
3.1 General 5
3.2 Calculation of 5 and 95 percentiles values 5
3.2.1 General 5
3.2.2 Parametric calculation 5
3.2.3 Non parametric calculation 7
3.3 Calculation of characteristic mean values 7

4 Calculation of characteristic properties from test results in the frame of internal factory production control 9
4.1 General 9
4.2 Calculation of characteristic strength, density or resistance properties (5- percentile) 9
4.3 Calculation of characteristic stiffness properties (mean values) 11

5 Acceptance procedure for verification of a lot 12
5.1 General 12
5.2 Verification of mean values (e.g. mean modulus of elasticity) 12
5.2.1 Method keeping the consumer's risk at 10 % 12
5.2.2 Alternative method limiting the sample size for large COVs 13
5.3 Verification of 5-percentile values (e.g. characteristic strength) 13
5.3.1 Method with consumer's risk equal to 10 % 13
5.3.2 Alternative method limiting the sample size for large COVs 14
