DIN 18009-1:2016-09 (E)

Fire safety engineering - Part 1: Basic principles and codes of practice

Contents

Page

Foreword ... 4

1 Scope ... 5

2 Normative references ... 5

3 Terms and definitions ... 5

4 Application of safety engineering verifications for fire safety design assessments ... 9
4.1 Basic principles ... 9
4.2 Verification ... 10
4.2.1 Engineering methods ... 10
4.2.2 Qualitative draft analysis, identification and evaluation of hazards ... 12
4.2.3 Argumentative engineering verification ... 12
4.2.4 Performance-based verification ... 13
4.2.5 Assessment of the analysis results ... 15

5 Identification and concretization of safety objectives ... 15
5.1 Protection interests and safety objectives ... 15
5.2 Functional requirements ... 15
5.3 Performance criteria ... 16

6 Identification of fire hazards and estimation of risks ... 16
6.1 Basic principles ... 16
6.2 Identification and evaluation of fire hazards ... 17
6.3 Fire risks ... 17
6.3.1 Basic principle ... 17
6.3.2 Qualitative evaluation of risks ... 17
6.3.3 Other methods of risk evaluation ... 18

7 Selection of relevant scenarios and their concretization ... 18
7.1 Principles ... 18
7.2 Fire scenarios and their concretization for calculations ... 20
7.2.1 Characteristic properties of design fire scenarios ... 20
7.2.2 Selection of design fire scenarios ... 21
7.2.3 Design fires ... 22
7.3 Vacation scenarios and their concretization ... 26
7.3.1 Characteristic features of vacation scenarios ... 26
7.3.2 Selection of design vacation scenarios ... 27
7.4 Scenarios and design scenarios for other aspects and their concretization ... 28

8 Selection of models ... 28
8.1 Basic principles for the selection and application of models ... 28
8.2 Basic principles for the selection of calculation models ... 28
8.3 Basic principles for the selection of experimental models ... 29
8.4 Basic principles for the selection of estimation methods ... 29
8.5 Validation and verification of computational models ... 29

9 Safety concept and safety coefficients 30
9.1 Basic principles 30
9.2 Specification of safety coefficients and allowances 30
9.2.1 General 30
9.2.2 Global safety concept 30
9.2.3 Partial safety concept 30

10 Documentation 31

11 Ensuring effectiveness and reliability 32

Annex A (normative) **General 33**

Annex B (normative) **Explanatory notes relating to Clause 4 ..... 36**
B.1 to 4.1: Basic principles 36
B.2 Suitable protective measures (Best Practice) 37
B.3 Fire safety design modules with engineering methods 38

Annex C (normative) **Explanatory notes relating to Clause 6 ..... 44**
C.1 Other methods for the assessment of fire risks 44

Annex D (normative) **Explanatory notes relating to 7.2.2 Systematics for the selection of design fire scenarios 46**

Annex E (normative) **Explanatory notes relating to Clause 8 ..... 49**
E.1 Models for the fire simulation 49
E.2 Models for the simulation of streams of persons 50
E.3 Models for calculation of the load-bearing and deformation behaviour of components and structures 51
E.4 Models for the evaluation of fire integrity and thermal insulation 52
E.5 Experimental models 52
E.6 Estimation procedures 53
E.7 Validation and verification 53
