ISO/TR 13571-2:2016-07 (E)

Life-threatening components of fire - Part 2: Methodology and examples of tenability assessment

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms and definitions 1

4 Principle 1

5 Performance criteria 3

6 Evaluation of the impact 3
6.1 Effects of fire on people 3
6.2 Models for toxic impact 3
6.3 Models for thermal impact 4
6.3.1 Radiant flux exposure model 4
6.3.2 Temperature exposure model 4
6.3.3 Dose calculation model 4

7 Examples of application 4

Annex A (informative) Example of application to real-scale fire scenarios - FED and ASET calculations for fire experiments conducted in a full-scale test house under two basement fire scenarios 6

Annex B (informative) Example of application to real-scale fire scenarios - FED calculations for fire experiments conducted in a full-scale test of single sleeping rooms 20

Annex C (informative) Methodology for application of ISO 13571 in Fire Safety Engineering approach 41

Annex D (informative) Example of application to Fire Safety Engineering-Case Nr 1 - hotel room and corridor 51

Annex E (informative) Example of application to Fire Safety Engineering - Case Nr 2 - restaurant 64

Annex F (informative) Determination of data for matrix 81
