DIN EN 1993-4-1:2017-09 (E)

Eurocode 3: Design of steel structures - Part 4-1: Silos

Contents

European foreword 4

European foreword to Amendment 1 8

1 General 9
- 1.1 Scope 9
- 1.2 Normative references 9
- 1.3 Assumptions 10
- 1.4 Distinction between principles and application rules 10
- 1.5 Terms and definitions 10
- 1.6 Symbols used in Part 4.1 of Eurocode 3 13
- 1.7 Sign conventions 15
- 1.8 Units 20

2 Basis of design 21
- 2.1 Requirements 21
- 2.2 Reliability differentiation 21
- 2.3 Limit states 22
- 2.4 Actions and environmental effects 23
- 2.5 Material properties 23
- 2.6 Geometrical data 23
- 2.7 Modelling of the silo for determining action effects 23
- 2.8 Design assisted by testing 23
- 2.9 Action effects for limit state verifications 24
- 2.10 Durability 25
- 2.11 Fire resistance 25

3 Properties of materials 26
- 3.1 General 26
- 3.2 Structural steels 26
- 3.3 Stainless steels 26
- 3.4 Special alloy steels 26
- 3.5 Toughness requirements 27

4 Basis for structural analysis 28
- 4.1 Ultimate limit states 28
- 4.2 Analysis of the structure of a shell silo 29
- 4.3 Analysis of the box structure of a rectangular silo 32
- 4.4 Equivalent orthotropic properties of corrugated sheeting 33

5 Design of cylindrical walls 36
- 5.1 Basis 36
- 5.2 Distinctions between cylindrical shell forms 36
- 5.3 Resistance of silo cylindrical walls 37
- 5.4 Special support conditions for cylindrical walls 64
- 5.5 Detailing for openings in cylindrical walls 69
- 5.6 Serviceability limit states 70

6 Design of conical hoppers 71
6.1 Basis 71
6.2 Distinctions between hopper shell forms 71
6.3 Resistance of conical hoppers 72
6.4 Considerations for special hopper structures 77
6.5 Serviceability limit states 79

7 Design of circular conical roof structures 80
7.1 Basis 80
7.2 Distinctions between roof structural forms 80
7.3 Resistance of circular conical silo roofs 80

8 Design of transition junctions and supporting ring girders 82
8.1 Basis 82
8.2 Analysis of the junction 80
8.3 Structural resistances 92
8.4 Limit state verifications 96
8.5 Considerations concerning support arrangements for the junction 98

9 Design of rectangular and planar-sided silos 100
9.1 Basis 100
9.2 Classification of structural forms 100
9.3 Resistance of unstiffened vertical walls 101
9.4 Resistance of silo walls composed of stiffened and corrugated plates 101
9.5 Silos with internal ties 100
9.6 Strength of pyramidal hoppers 106
9.7 Vertical stiffeners on box walls 108
9.8 Serviceability limit states 108

Annex A: [Informative] 110

Simplified rules for circular silos in Consequence Class 1 110
A.1 Action combinations for Consequence Class 1 110
A.2 Action effect assessment 110
A.3 Ultimate limit state assessment 110

Annex B: [Informative] 117

Expressions for membrane stresses in conical hoppers 117

Annex C: [Informative] 119

Distribution of wind pressure around circular silo structures 119
