ISO/TS 14411-1:2017-05 (E)

Preparation of particulate reference materials - Part 1: Polydisperse material based on picket fence of monodisperse s pherical particles

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms,definitionsandsymbols 1
3.1 Terms and definitions 1
3.2 Symbols 2

4 Material requirements for preparing the individual monodisperse fractions 3
4.1 General description 3
4.2 Requirements on the general properties of the material for individual pickets 3

5 Characterization of the individual monodisperse fractions 4
5.1 Particle size distribution 4
5.2 Aspect ratio 5
5.3 Density 5
5.4 Refractive index 5

6 Preparation of picket-fence distributions 5
6.1 General 5
6.2 Preparation of individual pickets 6
6.2.1 General 6
6.2.2 Preparation of suspensions from dry powders 6
6.2.3 Determination of the particle mass fraction of suspensions 6
6.3 Preparation of a picket fence distribution 6
6.3.1 General 6
6.3.2 Preparation from dry powders 6
6.3.3 Preparation from suspensions 7

7 Estimation of uncertainties 7
7.1 General 7
7.2 Uncertainty of a volume-based size distribution due to limited number of particles counted 7
7.3 Uncertainty of a number-based size distribution 8
7.4 Picket-fence distributions composed of more than two kinds of quasi- monodisperse particles 9
7.5 Uncertainty of a count base size distribution due to various number fraction 10
7.6 Uncertainty of a mass base size distribution due to various mass fractions 10
7.7 Uncertainty estimation based on the data before or after the mixing process 10
7.8 Uncertainty due to microscopic scale measurement 12
7.9 Uncertainty due to surrounding particles in microscopic measurement 12
7.10 Other uncertainty contributions 12
7.11 Combined uncertainty 12

Annex A (informative) Picket-fence distributions composed of more than two kinds of quasi-monodisperse particles 13

Annex B (informative) Example of reliability calculation for a mass-based cumulative size distribution transformed from the number-based size distribution 16

Annex C (informative) Example of uncertainty estimation due to mixture fraction and sample size .. 19

Annex D (informative) Uncertainty estimation of various cases 21
