ISO 13370:2017-06 (E)

Thermal performance of buildings - Heat transfer via the ground - Calculation methods

Contents

Page

Foreword v

Introduction vi

1 Scope 1

2 Normative references 1

3 Termsanddefinitions 2

4 Symbols and subscripts 3
4.1 Symbols 3
4.2 Subscripts 3

5 Description of the method 4
5.1 Output 4
5.2 General description 4
5.3 Periodic coefficients 5

6 Calculation of heat transfer via the ground 5
6.1 Output data 5
6.2 Calculation time intervals 6
6.3 Input data 7
6.4 Thermal properties 7
6.4.1 Thermal properties of the ground 7
6.4.2 Thermal properties of building materials 8
6.4.3 Surface resistances 8
6.5 Internal temperature and climatic data 8
6.5.1 Internal temperature 8
6.5.2 Climatic data 8
6.6 Thermal transmittance and heat flow rate 9
6.6.1 Thermal transmittance 9
6.6.2 Thermal bridges at edge of floor 9
6.6.3 Calculation of heat flow rate 9
6.6.4 Effect of ground water 9
6.6.5 Special cases 10
6.7 Parameters used in the calculations 10
6.7.1 Characteristic dimension of floor 10
6.7.2 Equivalent thickness 11

7 Calculation of thermal transmittances 11
7.1 Slab-on-ground floor 11
7.2 Suspended floor 13
7.3 Heated basement 15
7.3.1 General 15
7.3.2 Basement floor 17
7.3.3 Basement walls 17
7.3.4 Heat transfer from whole basement 18
7.4 Unheated basement 18
7.5 Partly heated basement 19
7.6 Effective thermal resistance of floor construction 19

Annex A (normative) Input and method selection data sheet -- Template 20

Annex B (informative) Input and method selection data sheet -- Default choices 23

Annex C (normative)Calculationofgroundheatflowrate 26

Annex D (normative) Slab-on-ground with edge insulation 32

Annex E (informative)Heatflowratesforedgeandcentralregionsofabuilding 37

Annex F (normative) Application to dynamic calculation programmes 38

Annex G (normative)Ventilationbelowsuspendedfloors 40

Annex H (normative)Periodicheattransfercoefficients 43
