ISO/TR 24679-2:2017-07 (E)

Fire safety engineering - Performance of structure in fire - Part 2: Example of an airport terminal

Contents

Page

Foreword iv

Introduction v

1 Scope 1

2 Normative references 1

3 Terms, definitions and symbols 1

4 Design strategy for fire safety of structures 3

5 Quantification of the performance of structures in fire 3
5.1 Step 1: Scope of the project for fire safety of structures 3
5.1.1 Built environment characteristics 3
5.1.2 Fuel loads 4
5.1.3 Mechanical actions 5
5.2 Step 2: Identify objectives, functional requirements and performance criteria for fire safety of structures 6
5.3 Step 3: Trial design plan for fire safety of structures 7
5.4 Step 4: Design fire scenarios and design fires 9
5.4.1 Design fire scenarios 10
5.4.2 Design fires (thermal actions) 11
5.5 Step 5: Thermal response of the structure 17
5.5.1 Smoke temperature from FDS simulation 17
5.5.2 Calculating steel temperature exposed to smoke 19
5.6 Step 6: Mechanical response of the structure 20
5.6.1 Deformation analysis of the structure 21
5.6.2 Strength analysis of the main span under fire exposure 22
5.7 Step 7: Assessment against the fire safety objectives 26
5.8 Step 8: Documentation of the design for fire safety of structures 27
5.9 Factors and influences to be considered in the quantification process 28
5.9.1 Material properties 28
5.9.2 Effect of continuity and restraint (interaction between elements and materials) 30
5.9.3 Use of test results 30
5.9.4 Fire spread routes 30

6 Guidance on use of engineering methods 31

Annex A (informative) Views and plans of the airport terminal 32

Bibliography 34
