

DIN 4109-1:2018-01 (E)

Sound insulation in buildings - Part 1: Minimum requirements

| Contents | | Page |
|---|---|-------------|
| Foreword | | 3 |
| Introduction | | 4 |
| 1 | Scope | 5 |
| 2 | Normative references | 5 |
| 3 | Terms and definitions | 6 |
| 4 | Characteristic quantities for the requirements | 11 |
| 5 | Airborne and impact sound insulation in buildings with living or working areas | 11 |
| 5.1 | Requirements in multi-family dwellings, office buildings and in mixed-use buildings | 11 |
| 5.2 | Requirements between single-family terraced houses and between semi-detached houses | 14 |
| 6 | Airborne and impact sound insulation in non-residential buildings | 15 |
| 6.1 | Hotels and lodging establishments | 15 |
| 6.2 | Hospitals and sanatoriums | 15 |
| 6.3 | Schools and comparable institutions (e.g. training centres) | 17 |
| 7 | Requirements for airborne sound insulation in external building components | 18 |
| 7.1 | Requirements for external building components taking into account different types of rooms or uses | 18 |
| 7.2 | Requirements for floors and roofs | 19 |
| 7.3 | Influence of ventilation equipment and/or roller shutter boxes | 20 |
| 8 | Requirements for airborne and impact sound insulation between "particularly noisy" rooms and rooms requiring protection | 20 |
| 9 | Maximum permissible A-weighted sound pressure levels in other rooms requiring protection, generated by building services equipment and commercial operations structurally connected to the building | 22 |
| 10 | Maximum permissible A-weighted sound pressure levels in rooms requiring protection in personal dwellings, generated by HVAC systems in personal living areas | 23 |
| 11 | Requirements for valves and drinking water installation devices | 24 |
| Annex A (informative) Explanatory notes on sound insulation | | 27 |
| Annex B (informative) Recommendations for maximum A-weighted sound pressure levels in personal dwellings, generated by heating systems in personal living areas | | 29 |
| Bibliography | | 30 |
