

DIN EN 16907-4:2019-04 (E)

Earthworks - Part 4: Soil treatment with lime and/or hydraulic binders

Contents		Page
European foreword		6
Introduction		7
1	Scope	9
2	Normative references	9
3	Terms and definitions	11
4	Symbols and abbreviations	14
5	Constituents	15
5.1	Materials	15
5.1.1	General	15
5.1.2	Natural soils and processed aggregates	15
5.1.3	Low strength, intermediate strength and high strength rocks, and chalk	15
5.1.4	Recycled materials	15
5.1.5	Artificial materials	15
5.2	Binders	15
5.2.1	Cement	15
5.2.2	Fly ash	16
5.2.3	Slag	16
5.2.4	Hydraulic road binder	16
5.2.5	Lime	16
5.2.6	Blends	16
5.3	Water	16
5.4	Other constituents	16
6	Mixtures	16
6.1	General	16
6.2	Proportioning	16
7	Laboratory testing methodology	17
7.1	General	17
7.2	Identification tests	17
7.2.1	Identification of the materials to be treated	17
7.2.2	Identification of the binders	17
7.3	Feasibility of treatment	17
7.4	Workability period	18
7.5	Characteristics for execution	18
7.5.1	Improvement	18
7.5.2	Stabilization	18
7.6	Mechanical performance	19
7.6.1	Curing conditions	19
7.6.2	Resistance to water	19
7.6.3	Strength for direct construction trafficking	19
7.6.4	Resistance to frost	19
7.6.5	Performance classification testing	19
7.6.6	Other performance tests	20
7.7	Preparation of the specimens	20
7.7.1	Particle size of the material	20

7.7.2	Production of the mixtures	20
7.7.3	Dimensions of the specimens.....	20
7.7.4	Compaction procedures	20
7.7.5	Curing.....	21
7.8	Content of the laboratory studies	21
7.8.1	General	21
7.8.2	Identification of the constituents.....	21
7.8.3	Improvement.....	21
7.8.4	Stabilization.....	21
7.9	Laboratory testing report.....	22
8	Performance classification of the mixtures	23
8.1	General	23
8.2	Improvement.....	23
8.2.1	General	23
8.2.2	Immediate bearing index.....	24
8.2.3	Moisture condition value	24
8.2.4	Degree of compaction.....	24
8.2.5	Swelling	25
8.3	Stabilization.....	25
8.3.1	Requirements for the fresh mixture	25
8.3.2	Laboratory mechanical performance classification	28
8.3.3	Resistance to water.....	32
8.3.4	Strength for direct construction trafficking.....	34
8.3.5	Resistance to frost	34
8.3.6	Other performance.....	34
9	Execution and control	34
9.1	Introduction.....	34
9.1.1	General	34
9.1.2	Prerequisites.....	34
9.2	Preliminary engineering check	35
9.2.1	General	35
9.2.2	Site investigation	35
9.2.3	Sulfide, sulfate, organic matter and other deleterious materials	35
9.2.4	Influential parameters.....	36
9.2.5	Prior laboratory testing	36
9.3	Binders	36
9.4	Soil treatment plant types	36
9.5	Soil improvement	37
9.5.1	General	37
9.5.2	Materials suitable for improvement.....	37
9.5.3	Improvement during excavation	37
9.5.4	Improvement in fill area	37
9.5.5	Binder spreading	37
9.5.6	<i>In situ</i> mixing.....	38
9.5.7	Compaction	38
9.5.8	Protection of the works	38
9.5.9	Climatic considerations.....	38
9.6	Soil stabilization.....	38
9.6.1	General	38
9.6.2	Material suitable for stabilization	39
9.6.3	Soil preparation	39
9.6.4	Stabilization processes for capping and embankment.....	40

9.6.5	Other applications	42
9.6.6	Layer Interface and organization of the work	42
9.7	Testing and Compliance.....	43
9.7.1	Specification.....	43
9.7.2	Compliance tests and records.....	43
9.7.3	Completion reports	45
9.8	Climatic and practical considerations	46
Annex A (informative) Production of test specimens for treated materials		47
A.1	Introduction	47
A.2	Sampling.....	47
A.3	Water content.....	47
A.4	Maximum size of the particles.....	47
A.5	Treatment	48
A.6	Mellowing and compaction of the treated material in the specimen mould	49
A.7	Curing and storage.....	49
A.8	Removing sample from the mould.....	50
A.9	Reporting	51
Annex B (informative) Loading speed for the strength and modulus tests		52
Annex C (informative) Non destructive seismic test method for mechanical performance		54
C.1	Introduction	54
C.2	Scope	54
C.3	Test apparatus.....	54
C.4	Definitions and theoretical approach.....	55
C.5	Principle of test method	56
C.6	Significance and use	56
C.7	Measurement.....	57
C.8	References	59
Annex D (informative) Example of evaluation of performance variability of treated soil as a result of variation during implementation Binder percentage adjustment and method for compensating it		60
Annex E (informative) Examples of age of classification and curing regimes for mechanical performance of treated materials for earthworks		62
Annex F (informative) Other performance characteristics for treated materials.....		63
Annex G (informative) Field and laboratory identifications of common sulfide and sulfate minerals.....		64
G.1	Field Identification	64
G.2	Laboratory Identification.....	64
G.3	References	65
Annex H (informative) Soil Treatment Plant Types		66

H.1	General	66
H.2	Binder storage units	66
H.3	Binder spreading units	66
H.4	Soil preparation plant.....	67
H.5	<i>In situ</i> mixing plant	67
H.6	Fixed or semi mobile mixing plants.....	69
H.7	Water bowsers.....	71
H.8	Compaction plant.....	71
Annex I (informative) Treatment sequence and processes		72
Annex J (informative) Other applications for stabilized materials		78
J.1	General	78
J.2	Filling in narrow places.....	78
J.3	Construction of lower layers in high embankments built with water sensitive soils or evolutive rocks which may be subject to occasional flooding.....	79
J.4	Steepened slopes of embankment.....	79
J.5	Slope repairs.....	80
J.6	Reinforced slopes	80
J.7	Foundations	80
J.8	Load transfer platforms	80
J.9	Water retaining structures	81
J.10	Contaminated soils.....	81
Annex K (informative) Site Stabilization checklist.....		82
Annex L (informative) Safety considerations		85
L.1	General	85
L.2	Specific protective equipment	85
Annex M (informative) Climatic and practical considerations		86
M.1	General	86
M.2	Weather.....	86
M.3	Binder dust emission.....	87
M.4	Run off and leachate	88
Annex N (informative) Method and charts to determine the quantity of lime needed to reach a targeted IPI value		89
