

ISO/TR 24679-6:2017-12 (E)

Fire safety engineering - Performance of structures in fire - Part 6: Example of an eight-storey office concrete building

Contents	Page
Foreword	iv
Introduction	v
1 Scope	1
2 Normative references	1
3 Terms, definitions and symbols	1
3.1 Terms and definitions	1
3.2 Symbols	2
4 Design strategy for fire safety of structure	3
4.1 General design process for fire safety of structures	3
4.2 Guidance of practical design process for fire safety of structure	3
5 Qualification of the performance of structures in fire	3
5.1 STEP 1: Scope of the project for fire safety of structure	3
5.1.1 Built-environment characteristics	3
5.1.2 Fuel loads	6
5.1.3 Mechanical actions	7
5.2 STEP 2: Identifying objectives, functional requirements, and performance criteria for fire safety of structure	8
5.3 STEP 3: Trial plan for fire safety of structure	10
5.4 STEP 4: Design fire scenarios and design fires	10
5.4.1 General	10
5.4.2 Design fire scenarios	10
5.4.3 Design fires	11
5.5 STEP 5: Thermal response of the structure	17
5.5.1 General	17
5.5.2 Thermal analysis of the slab	18
5.5.3 Thermal analysis of the beam	19
5.5.4 Thermal analysis of the column	21
5.6 STEP 6: Mechanical response of the structure	21
5.6.1 Structural model	21
5.6.2 Assumptions of the analysis	22
5.6.3 Structural behaviour of the building	24
5.7 STEP 7: Assessment against the fire safety objectives	34
5.8 STEP 8: Documentation of the design for fire safety of structures	34
5.9 STEP 9: Factors and influences to be considered in the quantification process	35
5.9.1 Material properties	35
Annex A (informative) Heat transfer of calculation	39
Annex B (informative) Results from thermal and mechanical analyses	40
Annex C (informative) Results from OAT sensitivity analysis for the uncertainty of material properties	44
Bibliography	48
