ISO 12122-5:2018 (E)

Timber structures — Determination of characteristic values — Part 5: Mechanical connections

Contents

Foreword

Introduction

1 Scope

2 Normative references

3 Terms and definitions

4 Symbols

5 Reference population

6 Sampling

6.1 Sampling method
6.2 Sample size

7 Sample conditioning

8 Test data

8.1 General
8.2 Test method
8.2.1 Monotonic loading of connections
8.2.2 Cyclic loading of connections
8.3 Test data compatible with product description
8.4 Failure modes

9 Evaluation of characteristic values for structural properties

9.1 Structural properties
9.2 Characteristic initial stiffness of the connection (monotonic loading)
9.3 Characteristic stiffness of the connection (cyclic loading)
9.4 Characteristic capacity of the connection
9.4.1 Characteristic capacity
9.4.2 Test load in monotonic tests
9.4.3 Test load in cyclic load tests

10 Report

Annex A (informative) Commentary

A.1 Commentary on scope
A.2 Commentary on normative references
A.3 Commentary on terms and definitions
A.4 Commentary on symbols
A.5 Commentary on reference population
A.6 Commentary on sampling
A.7 Commentary on sample conditioning
A.8 Commentary on testing
A.8.1 Commentary on test method
A.8.2 Commentary on test data compatible with product description
A.8.3 Commentary on failure modes
A.9 Commentary on evaluation of characteristic values for structural properties
A.9.1 Commentary on structural properties

A.9.2 Commentary on characteristic initial stiffness (monotonic loading)
A.9.3 Commentary on characteristic stiffness (cyclic loading)
A.9.4 Commentary on characteristic values of capacity
A.10 Commentary on report
